## 1. Introduction

- 1.1 The purpose of this Report is to review the Sunderland Green Belt, which was originally established in 1965 via the Sunderland Periphery Town Map. This report assesses land in the Green Belt to determine where the Green Belt boundaries could be amended to meet Sunderland's objectively assessed needs until 2033 and beyond.
- 1.2 This report updates the Stage 1 Green Belt Review, published in May 2016. In line with best practice advice from Arup consultants, it was agreed that Stage 2 would carry out a review of Stage 1 as well as an identification of Category 1 constraints within the Green Belt. Further detailed information was provided to clarify the overall review approach as well as the assessment of Green Belt parcels of land.

## Background

- 1.3 Sunderland City Council is in the process of preparing a new Local Plan for the City. The Local Plan will comprise of three key documents; a Core Strategy and Development Plan (CSDP), which will set out the overarching spatial strategy for development within the city over the plan period from 2015-2033, as well as containing more specific detailed Development Management policies; and a separate Allocations and Designations Plan which will make the site specific allocations necessary to deliver the Core Strategy. The International Advance Manufacturing Park Area Action Plan, which is being prepared jointly with South Tyneside to enable the delivery of a new International Advanced Manufacturing Park on land to the north of the existing Nissan car manufacturing plant, will also be part of the Local Plan.

- 1.4 The Council's latest Strategic Housing Market Assessment (SHMA, 2017) identifies the Council's Objectively Assessed Need (OAN) for housing over the plan period to be 13,824 net additional dwellings, which is the equivalent to an average of 768 net additional dwellings per annum. Having exhausted all other sustainable options outside of the Green Belt, a shortfall of 1,357 homes has been identified. Land release from the Green Belt remains the only realistic development solution for the city.

## The Purpose of this Report

1.5 There are 4 purposes of this report:

- 1) To review Stage 1 to take into consideration representations received during the consultation and retest the Green Belt against its 5 purposes.
- 2) To determine if any sites should be discounted or boundaries altered because of Category 1 designations.
- 3) Review all sites that have been submitted from landowners/developers to the city's Strategic Housing Land Availability Assessment (SHLAA) since 2008 or to the 2016 Strategic Land Review
- 4) Identify sites which should be assessed At Stage 3 – site selection.

1.6 This report has been structured in the following manner:

- Section 2: National policy
- Section 3: Sunderland's Green Belt
- Section 4: Exceptional circumstances for amending the Green Belt boundary in Sunderland
- Section 5: Green Belt methodology
- Section 6: Conclusions
- Sections 7: Next steps
- Appendix 1: Green Belt Review Stage 1 update and Stage 2 constraints assessment
- Appendix 2: Call out for sites

## 2. National Policy

- 2.1 The Government attaches great importance to Green Belts, and this is clarified in the National Planning Policy Framework (NPPF, 2012). The NPPF states that the fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. Green Belt serves five purposes:
- To check the unrestricted sprawl of large built-up areas;
  - To prevent neighbouring towns merging into one another;
  - To assist in safeguarding the countryside from encroachment;
  - To preserve the setting and specialist character of historic towns; and
  - To assist in urban regeneration by encouraging the recycling of derelict and other urban land.”
- 2.2 The NPPF endorses the permanence of Green Belts as an essential characteristic (paragraph 79) and stipulates that ‘once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan’ (paragraph 83).
- 2.3 With regard to amending Green Belt boundaries, Paragraph 85 states that Local planning authorities should:
- Ensure consistency with the Local Plan strategy for meeting identified requirements for sustainable development;
  - Not include land which it is unnecessary to keep permanently open;
  - Where necessary, identify in their plans areas of ‘safeguarded land’ between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period;
  - Make clear that the safeguarded land is not allocated for development at the present time. Planning permission for the permanent development of safeguarded land should only be granted following a Local Plan review which proposes the development;
  - Satisfy themselves that Green Belt boundaries will not need to be altered at the end of the development plan period; and
  - Define boundaries clearly, using physical features that are readily recognisable and likely to be permanent.”

### Green Belt Boundaries

- 2.4 Defining the boundary of the Green Belt is especially important in order for the Green Belt itself to be defensible. Once the Green Belt boundaries have been decided they should only be changed under exceptional circumstances. The NPPF advocates that boundaries should be drawn so that they will endure, and land that is unnecessary to be kept open should not be included in the Green Belt. If the boundaries are nonsensical or too tightly drawn the Green Belt boundaries will be difficult to defend and therefore the Green Belt will be under threat from encroachment.
- 2.5 Green Belts should have intended permanence to endure beyond the Plan period. The Green belt boundary should be consistent with the need to meet identified requirements for sustainable development. The local authority should be satisfied that

the boundary will not need to be altered at the end of the plan period, or include land which is not necessary to keep permanently open. 'Where feasible, recognisable physical and permanent features, such as roads, streams, belts of trees or woodland edges, should be used to define boundaries' (paragraph 85 of the NPPF).

- 2.6 Once Green Belts have been defined, local planning authorities should plan positively to enhance the beneficial use of the Green Belt, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land.

### **Safeguarding Land**

- 2.7 There is also a requirement for Green Belt boundaries to 'where necessary, identify in their plans areas of 'safeguarded land' between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period' (NPPF - paragraph 85).

### **Planning Practice Guidance**

- 2.8 The Planning Practice Guidance (PPG) states that local planning authorities should meet objectively assessed needs unless any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in the NPPF or specific policies indicate development should be restricted. Such policies include land designated as Green Belt. The PPG makes clear that, once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan.

### 3. Sunderland's Green Belt

3.1 The Green Belt around Sunderland, South Tyneside and Gateshead was originally established in the 1960s and forms part of the wider Tyne & Wear Green Belt and later formalised in the Tyne and Wear County Structure Plan 1978. Its specified objective is to: help manage the growth of the Tyneside and Wearside conurbations; prevent the merging of South Tyneside with Sunderland and Sunderland and Gateshead, and; maintain the separate character of the settlements which lie between.

#### Tyne & Wear County Structure Plan (1978)

3.2 The Structure Plan set out to limit urban growth and to prevent the coalescence of settlements, particularly the built-up areas of South Tyneside, Washington, Gateshead and Sunderland. The areas of Green Belt identified in the Structure Plan were broadly in line with that set out in the Sunderland Periphery Town Map and the Durham County Development Plan. The Tyne & Wear County Structure Plan sought to prepare a more detailed subject plan (Tyne & Wear Green Belt Local Plan) defining the areas within the Green Belt and to provide detailed policy guidance.

#### Tyne & Wear Green Belt Local Plan (1985)

3.3 This plan was produced in support of the Tyne & Wear County Structure Plan. The document comprised of a set of policies for the control and management of the Tyne and Wear Green Belt.

3.4 The Plan stated that:

A Green Belt will be defined which:-

- a) broadly approximates to the existing Green Belt (\* as set out in the Tyne & Wear Structure Plan) ; and
- b) prevents the merging of the following settlements : Sunderland with Washington, Houghton-le-Spring and Tyneside; Gateshead with Washington, Birtley, Kibblesworth or Whickham; Newburn with Throckley; and checks the urban sprawl around and maintains the separate character of Crawcrook, Ryton, Winlaton and Whickham.'

#### Sunderland Unitary Development Plan (UDP) and Post-UDP Green Belt Changes

3.5 In reviewing the Green Belt boundary for the Unitary Development Plan (UDP, 1998), an additional 463 hectares of land was formally added to the Sunderland Green Belt, bringing the total to 3,500 hectares in the city.

3.6 Sunderland's Green Belt has been 'largely' unchanged since 1998, apart from a few notable developments via applications which have successfully demonstrated 'very special circumstances'.

3.7 The UDP provided the following five main purposes of our Green Belt, which was interpreted from PPG2 national guidance at the time (the NPPF retained PPG2's five

purposes of Green Belt word-for-word). The five purposes are contained within Policy CN2 and are as follows:

Green Belt will be maintained that will

1. check the unrestricted sprawl of the built up area of Sunderland,
2. assist in safeguarding the city's countryside from further encroachment,
3. assist in the regeneration of the urban area of the city,
4. preserve the setting and special character of Springwell village and
5. prevent the merging of Sunderland with Tyneside, Washington, Houghton-le-Spring and Seaham, and the merging of Shiney Row with Washington, Chester-Le-Street and Bournmoor.

3.8 Two changes to the UDP interpretation are now proposed in the Draft CSDP:

- Purpose (1): the definition of the 'main built-up area' was set out in the 1985 Tyne and Wear Green Belt Local Plan, and within Sunderland this area includes Sunderland, Washington, Springwell Village and the linear built-up area stretching from Penshaw southwards to Houghton-le-Spring and Hetton-Le-Hole. The urban area outlined in the 2017 Core Strategy (See Map 1 below) closely matches this boundary and is used in this instance to define purpose (i) above. For clarity, the reference to 'Sunderland' will be replaced with 'the city', because 'Sunderland' can sometimes be considered to represent only the urban area east of the A19, whereas the main built-up area should be considered for the entire city area.
- Purpose (4) was introduced to the Tyne and Wear Green Belt upon the introduction of PPG2 in 1995, following advice received from the Department of the Environment at the time. No specific guidance regarding interpretation of this purpose was received, and Sunderland City Council put forward the reference to Springwell Village for this purpose as a major modification to the Draft UDP, (duly adopted in 1998). Given the precedent this has set, it is accepted that Springwell Village remains identified in this purpose. Furthermore, given the history and Conservation Area status of Newbottle village, this village is also included within this purpose. Further afield, the revoked RSS had identified Durham City as a historic town relevant to this purpose, but it is considered that Sunderland's Green Belt is too far afield (over 5km away) to warrant any relevance to Durham's historic setting and special character.

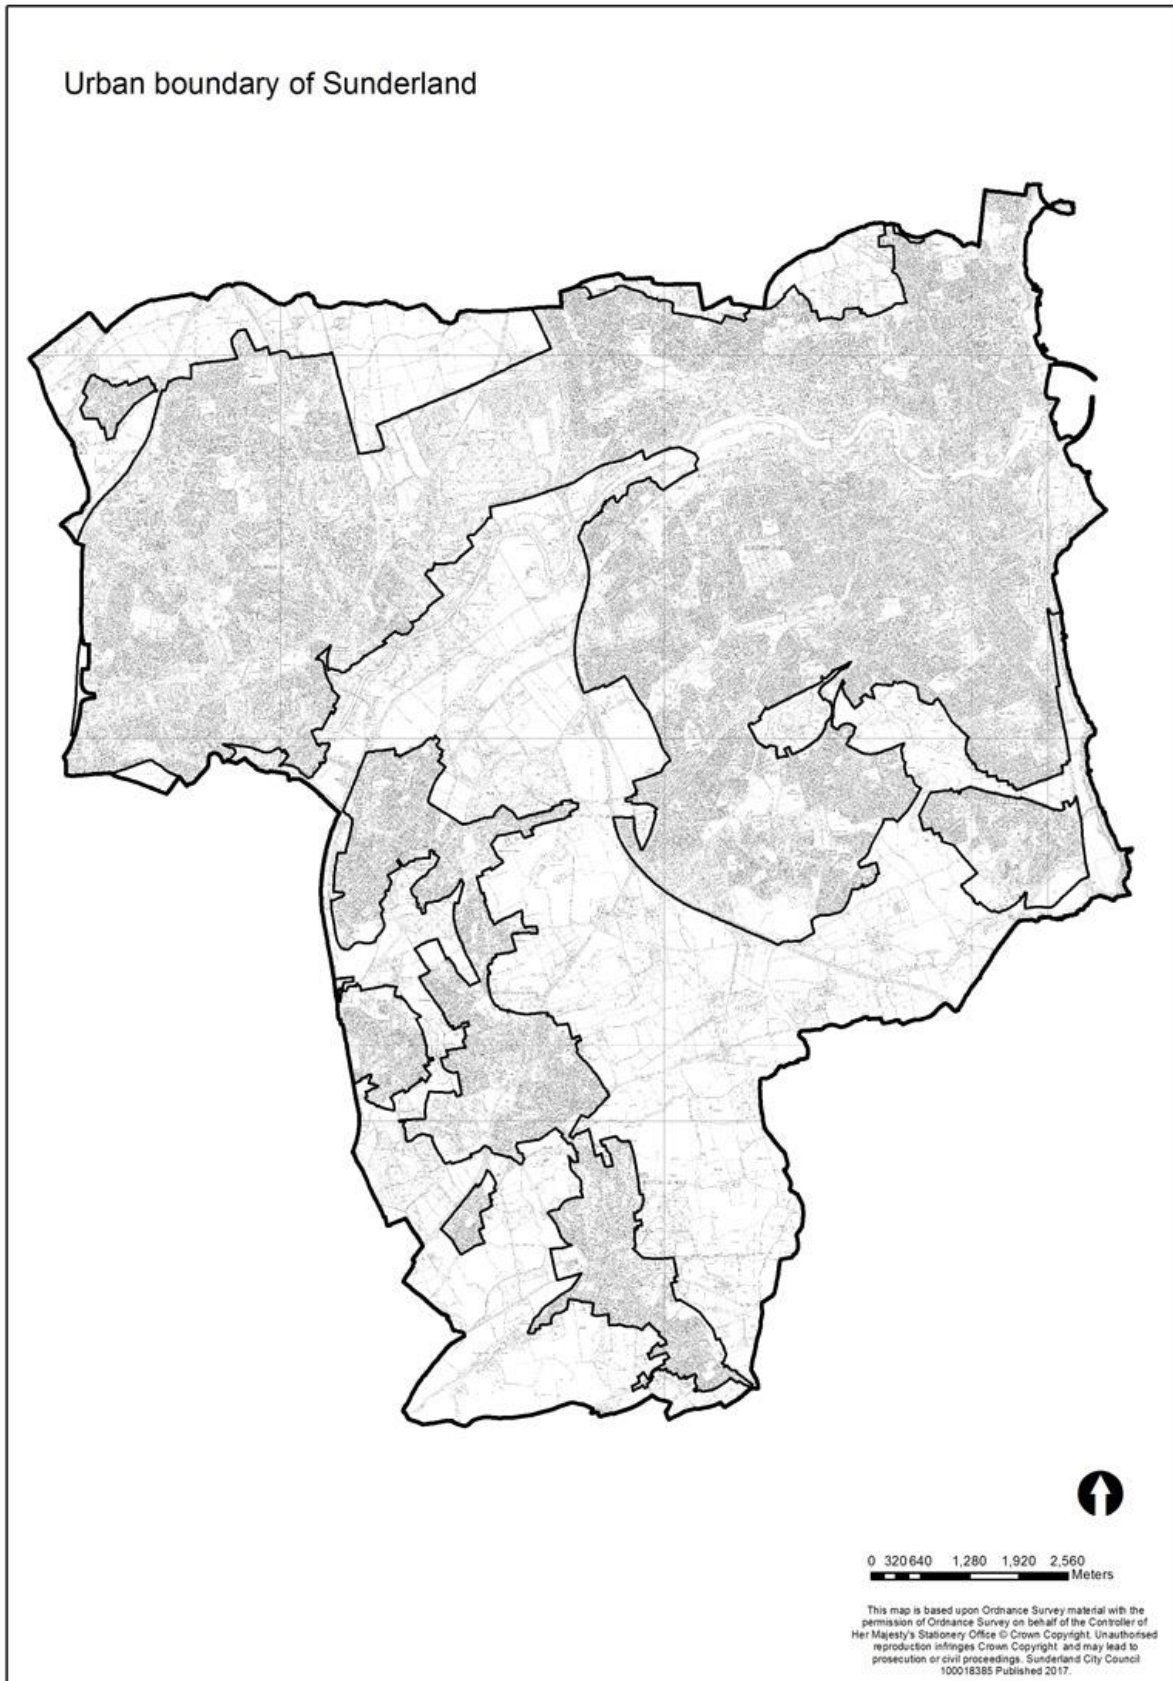

3.9 The Draft CSDP policy relating to Green Belt purpose is now as follows:

Policy E11: The Green Belt (as designated on the Policies Map) in Sunderland will be protected against inappropriate development and maintained to:

- i. check the unrestricted sprawl of the built up area of the city
- ii. assist in safeguarding the city's countryside from further encroachment
- iii. assist in the regeneration of the urban area of the city
- iv. preserve the setting and special character of Springwell Village and Newbottle Village, and
- v. Prevent the merging of Sunderland with Tyneside, Washington, Houghton-le-Spring and Seaham, and the merging of Shiney Row with Washington, Chester-Le-Street and Bournmoor.

## Map 1: Urban Boundary of Sunderland

## 4. Exceptional Circumstances for Amending the Green Belt Boundary in Sunderland

### Background

- 4.1 Paragraph 83 of the NPPF states that Green Belt boundaries are intended to be permanent in the long term and should only be altered in exceptional circumstances. Unless there is clear evidence of an under-provision in the supply of housing or employment land, or other unique exceptional circumstances exist, it is anticipated that most of the Green Belt in the city will remain unchanged. The Green Belt policy should not be viewed as constituting an outright prohibition on development in the Green Belt. Rather it is a prohibition on inappropriate development in the absence of very special circumstances.
- 4.2 A key purpose of this review is for the identification of the most appropriate land to be used for development, through the local plan. This approach has considered all of the other planning matters to be taken into account and most importantly, as part of an overall spatial strategy. In justifying the use of land in the Green Belt for development through the local plan, this assessment takes account of sustainability issues such as accessibility and environmental assets, together with an assessment against Green Belt purposes, and a reflection of development viability and potential for area regeneration.
- 4.3 In reviewing the Green Belt, it should be noted that the City Council will continue to focus on establishing sustainable patterns of growth, focusing development wherever feasible on urban areas and brownfield land, alongside transport interchanges and corridors, and beside existing centres so that the viability of local facilities can be bolstered.

### Meeting the City's Housing Requirements

- 4.4 The Council's latest Strategic Housing Market Assessment (SHMA, 2017) identifies the Council's Objectively Assessed Need (OAN) for housing over the plan period to be 13,824 net additional dwellings, which is the equivalent to an average of 768 net additional dwellings per annum.
- 4.5 In order to demonstrate that the Local Plan can meet the OAN and housing requirement over the plan period, the Council has undertaken several pieces of work in order to identify and assess the availability of land within the city. These include:
- an assessment of potential housing sites through the 2017 SHLAA
  - 2017 Greenspace Audit and Report
  - a desktop review of UDP allocations
  - 2017 Settlement Break Review
  - 2016 Strategic Land Review.
- 4.6 These reports have each identified additional housing land, and the SHLAA has reconsidered housing densities on all available sites. The SHLAA has also considered the viability of brownfield sites. A number of brownfield sites which have previously

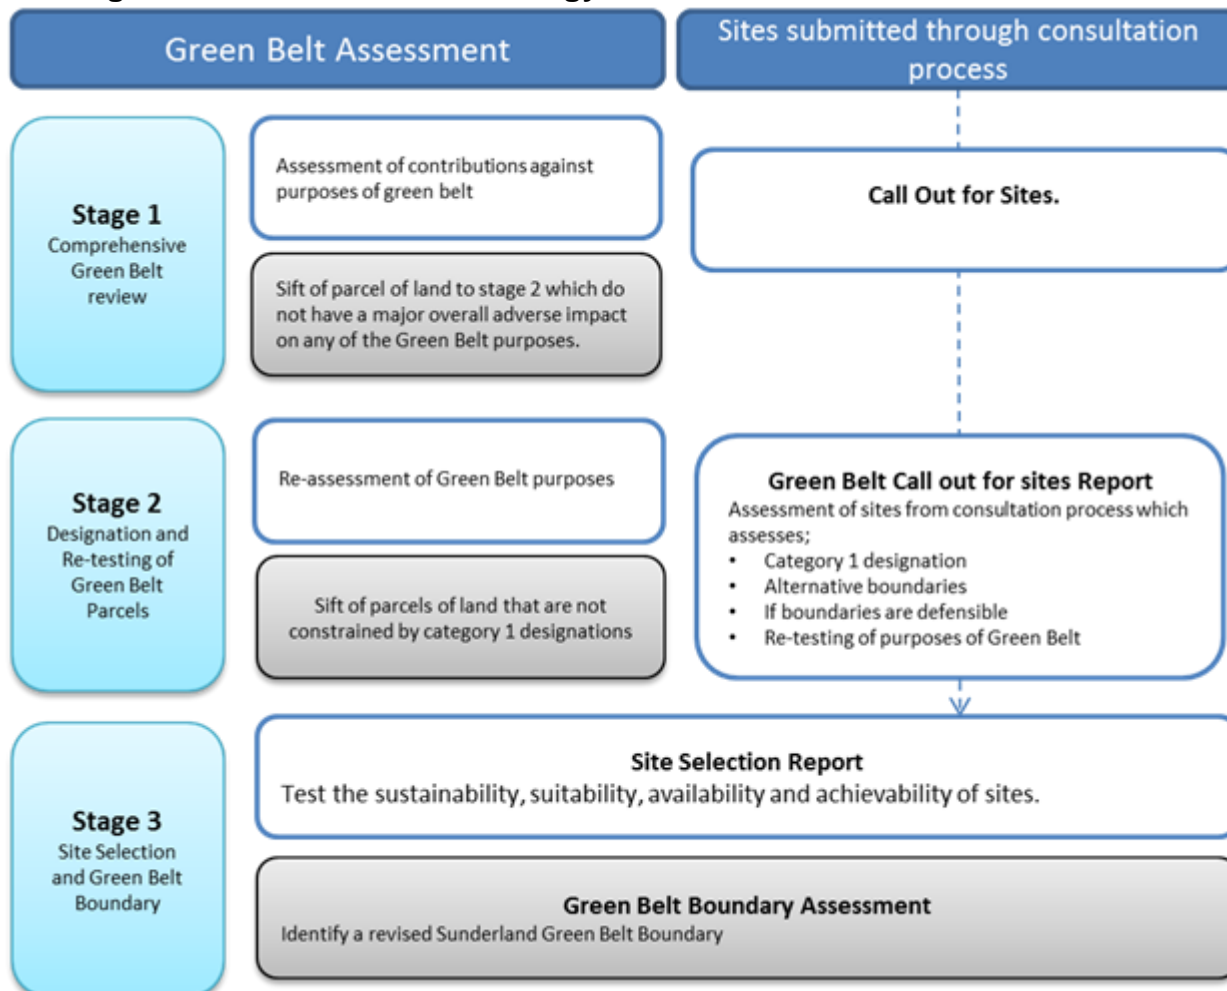

been considered developable within the SHLAA and contributed to the housing supply, have since been discounted due to viability work, which concluded that brownfield land typologies in certain areas of the city were not viable.

- 4.7 The 2017 SHLAA has identified 134 sites as deliverable and developable for housing over the remainder of the plan period (2017-2033), with a total combined capacity for 10,868 potential homes. This should be compared with the housing requirement of 13,824 (minus the housing completions for 2015-16 and 2016-17) leaving a target figure of 12,225 homes for the remaining plan period. There is therefore a shortfall of 1,357 homes. Furthermore, the spatial distribution of available housing land varies, and there is limited land available in Washington, where market pressure appears to be highest.
- 4.8 It is recognised that any Green Belt release sites identified through the plan to meet the above shortfall would not become available for development until the plan has been adopted and the land has been removed from the Green Belt. This would also therefore act as a constraint on the availability within the early years of the plan period. In recognition of this, and in order to ensure that the Council maintains a continuous five year supply of housing sites in accordance with the NPPF, it is proposed that the annual housing requirement is set at a lower level at the beginning of the plan period and is then increased for the remainder to ensure that the objectively assessed needs are met in full by 2033.
- 4.9 Having exhausted all other sustainable options outside of the Green Belt, land release from the Green Belt remains the only realistic development solution for the city. Furthermore, there are a number of Green Belt sites that lie in environmentally sustainable and relatively accessible locations, as well as being located in areas of the city where market demand for housing is strong. This process has enabled sound 'exceptional circumstances' to be demonstrated and sustainable locations for Green Belt release to be identified for housing.

## 5. Green Belt Methodology

5.1 The following section sets out the methodology used for undertaking this Green Belt review. The Review was undertaken in three stage stages as illustrated in Figure 1:

**Figure 1: Green Belt Methodology**

### Stage 1 – Comprehensive Review of Green Belt

5.2 The Stage 1 assessment considered all Green Belt land in Sunderland’s boundary, as defined by Fig 11.2 in the saved UDP, and using the revised definition of Green Belt purpose as outlined in Sections 3.7 and 3.8 of this report. The purpose of this Stage was to assess all Green Belt land against the purposes of Green Belt and identify lands which do not have a major overall adverse impact of any of the Green Belt purposes. Stage 2 reviewed and updated Stage 1, having taken into consideration representations received, and having undertaken expert advice from Arup Consultants.

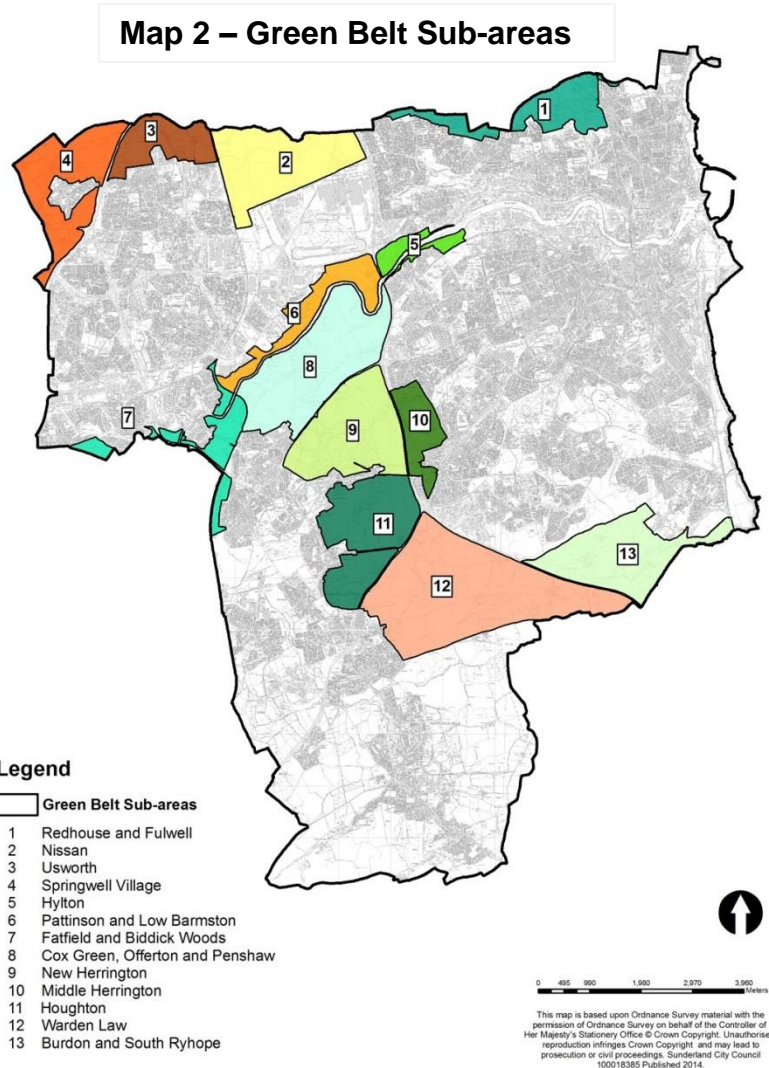

## Definition and Assessment of Green Belt Sub-areas

5.3 In assessing the city's Green Belt, 13 sub-areas have been defined based on permanent and defensible 'strategic' boundaries (see Map 2 - opposite).

5.4 The approach used is in accordance with paragraph 85 of the NPPF, local planning authorities should define boundaries clearly "using physical features that are readily recognisable and likely to be permanent." Sub-areas have therefore been based on the following defensible and durable features:

- A19, A690 and A194(M)
- Other roads (including 'A' and 'B' Roads)
- Existing and former railway lines
- The River Wear
- Urban area boundary
- Sunderland City Council boundary.

These are explained in more detail in Table 1, below:

**Table 1: Green Belt Sub-areas**

Sub Area	Explanation
1. Redhouse and Fulwell area	This relates to land solely within the Sunderland North Area Framework within the Green Belt gap between Sunderland and South Tyneside. The urban area forms the boundary to the south.
2. Nissan	This relates to land solely within the Washington Area Framework, in an area distinctly marked by the Leamside Line to the west, A1290 to the south and A19 to the east.
3. Usworth	This relates to land solely within the Washington Area Framework, in an area distinctly marked by the A194(M) to the west, the Leamside Line to the east and urban area of Washington New Town to the south
4. Springwell Village	This relates to land solely within the Washington Area Framework, to land surrounding the only village in the city that is inset from the Green Belt. It is physically separated from Washington by the

	A194(M), to the east.
5. Hylton	This relates to land adjacent to the River Wear Estuary that is solely within the Sunderland North Area Framework. It is distinctly bounded to the west by the A19, and by the urban area to the north, east and south.
6. Pattinson and Low Barmston	This relates to land adjacent to the River Wear Estuary that is solely within the Washington Area Framework. It is distinctly bounded by the River Wear, A19, A1231, Pattinson Industrial Estates and the Leamside Line.
7. Fatfield and Biddick Woods	This relates to land adjacent or near to the River Wear Estuary and incorporates Green Belt land that contributes to the gap between Washington, Penshaw/Shiney Row and Chester-Le-Street (County Durham). It encompasses land to the south of Washington New Town (to the city boundary), plus riverside land to the west of the Leamside Line and land west of the Shiney Row urban area (to the city boundary).
8. Cox Green, Offerton and Penshaw	This relates to land solely within the Coalfield Area Framework, in an area marked distinctly by the River Wear to the north, A19 to the east, A183 to the south and village of Penshaw to the south-west.
9. New Herrington	This relates to land solely within the Coalfield Area Framework, in an area marked distinctly by the A183 to the north and west, A19 to the east, and village of New Herrington / B1286 to the south.
10. Middle Herrington	This relates to land solely within the Sunderland West Area Framework. It is distinctly bounded to the west by the A19, and to the north, east and south by the urban area.
11. Houghton	This relates to land solely within the Coalfield Area Framework, in an area marked distinctly by the urban boundary of New Herrington, Newbottle and Houghton to the west, and the B1286, A19 and A690 to the east.
12. Warden Law	This relates to land solely within the Coalfield Area Framework, in an area marked distinctly by the urban boundary of Houghton to the west, the A690 and A19 to the north and the B1404 to the south.
13. Burdon and South Ryhope	This relates to land solely within the Sunderland East Area Framework within the Green Belt gap between Sunderland and Seaham. It is distinctly marked by Burdon Lane to the north, and to the south by the A19, former Seaton bank railway line and by Ryhope Dene (city boundary).

## Definition and Assessment of Parcels

5.5 The 13 sub-areas have been broken down into separate 'Parcels'. Parcel sizes vary, and may be kept large due to their land use or landscape similarity, while others have been created smaller because they have distinct qualities / defensible features to other neighbouring fields/parcels. In more general terms, Parcels were made small enough to provide a meaningful local assessment, while large enough to reflect the high level of assessment required of the study. Parcel boundaries have been defined

using permanent features wherever possible, though in some cases less durable features have been used for parcel boundaries where there are no other alternatives.

5.6 Table 2 shows how parcel boundaries are defined in line with the requirements in NPPF paragraph 85. Durable features will be used in the first instance, but where larger expanses of countryside exist (more akin to sub-areas), features lacking durability are used in order to divide areas of the Green Belt into smaller, manageable parcels. This requires an element of professional judgement.

**Table 2: Definition of Parcel Boundaries**

Type of feature	Feature
Durable features (readily recognisable and likely to be permanent)	<p>Infrastructure:</p> <ul style="list-style-type: none"> <li>• Motorway</li> <li>• Roads ('A' Roads, 'B' Roads and unclassified 'made' roads)</li> <li>• Railway line (in use or mothballed)</li> <li>• Existing boundaries with clear established, contiguous boundaries</li> </ul> <p>Natural:</p> <ul style="list-style-type: none"> <li>• Water bodies and water courses (lakes, rivers, streams)</li> <li>• Protected woodland (TPO) or hedges or ancient woodland that is contiguous</li> </ul> <p>Prominent landform (e.g. ridgeline)</p> <p>Combination of a number of boundaries below</p>
Features lacking durability (Soft boundaries which are recognisable but have lesser permanence)	<p>Infrastructure:</p> <ul style="list-style-type: none"> <li>• Private/unmade roads or tracks</li> <li>• Existing development with irregular boundaries</li> <li>• Disused railway alignments</li> <li>• Footpath accompanied by other physical features (e.g. wall, fence, hedge)</li> </ul> <p>Natural:</p> <ul style="list-style-type: none"> <li>• Watercourses (brook, drainage ditch, culverted watercourse) accompanied by other physical features</li> <li>• Field boundary accompanied by other natural features (e.g. tree line, hedge line)</li> </ul>

Aerial photography, Ordnance Survey maps and Geographical Information Systems (GIS) were used to identify these parcels of land. Each parcel has been mapped and assigned a unique reference number.

### Assessment of Parcels – Purpose of Green Belt

5.7 Each parcel has been assessed against the UDP purposes of Green Belt, which are considered to be aligned to the NPPF, but respect local circumstances and the unique character of Sunderland. The purpose of the assessment was to establish any differentiation in terms of how the Parcels in the existing Green Belt function and fulfil the purposes of the Green Belt at a strategic level. Stage 2 has updated this

assessment, taking into consideration representations made during Growth Options consultation. For purposes 1-4, each parcel was scored against the following:

A	zero
B	minor impact which can be mitigated
C	moderate impact which can be mitigated
D	Moderate overall adverse impact / some mitigation feasible
E	major overall adverse impact

5.8 For purpose 5, parcels were scored against different criteria, as indicated below:

A	Forms part of a built up area, brownfield land
B	Greenfield land within a built up area, or brownfield land in urban fringe
C	Greenfield land in urban fringe or brownfield land in open countryside
D	Greenfield land in open countryside

5.9 The following sub-sections examine the definition of each of the five purposes of the Green Belt in relation to local objectives and role of the Green Belt in terms of achieving its purpose locally; and set out the criteria and associated scoring applied. The criteria and scores were discussed and refined in collaboration with Council officers.

### Purpose 1 - Check the Unrestricted Sprawl of the Built-up Area of the City

5.10 Green Belt adjacent to large built-up areas should function to protect open land that is contiguous or connected to the urban area (the city). Therefore the review assessed each parcel against the following criteria:

- the degree of containment provided by the adjoining built up area, i.e. is it well contained (may have more than two boundaries with the built up area), partially contained (no more than two boundaries with the built up area) or not contained (no more than one boundary with the built up area);
- potential for rounding-off an existing built up area, i.e. development of the Green Belt would allow development to extend in a way that would create a new boundary which regularises and aligns with the urban form
- whether a distinct physical boundary or barrier already existed with the built-up area
- whether the parcel already acts as a minor developed area, already linked to the main built-up area, and could not provide any further sprawl.

5.11 The following was used to attribute a score to each parcel (see Table 3):

**Table 3: Purpose 1 Scoring Criteria**

Score	Criteria
<b>A</b> Zero impact	would be where:–
<b>B</b> Minor impact which can be mitigated	<ul style="list-style-type: none"> <li>• the area may adjoin the built up area on at least 2 or more boundaries and is well contained by the existing urban form. Development could be considered to be 'infill'</li> <li>• there is considerable potential for rounding-off the urban area or settlement</li> </ul>

	<ul style="list-style-type: none"> <li>the presence of well-defined physical boundaries would prevent further sprawl beyond any potential new boundary with the Green Belt</li> <li>the area already acts as a minor developed area in its own right and is linked to the existing main built-up area, and could not provide any further physical sprawl.</li> </ul>
<b>C</b> Moderate impact, which can be mitigated	one or more of the following circumstances may be evident: <ul style="list-style-type: none"> <li>The Parcel has 1-2 boundaries with the built-up area</li> <li>There is little opportunity for rounding-off the existing built-up area</li> <li>There is considerable protrusion into the wider Green Belt</li> <li>A strong physical boundary or barrier may already exist with the built up area.</li> </ul>
<b>D</b> Moderate overall adverse impact/ some mitigation feasible	
<b>E</b> Major overall adverse impact	one or more of the following circumstances may be evident: <ul style="list-style-type: none"> <li>No boundary with the built-up area, or only a very minor one, and one that would represent a very substantial protrusion into the wider Green Belt. This may also be applicable if there is be a major existing and distinct separation (such as a motorway or dual carriageway) between Green Belt and built-up area</li> <li>No potential for rounding-off of the existing built-up area</li> <li>A very distinct physical boundary or barrier may already exist with the built-up area.</li> </ul>

**Purpose 2 - Prevent the merging of Sunderland with Tyneside, Washington, Houghton-le-Spring and Seaham, and the Merging of Shiney Row with Washington, Chester-Le-Street and Bournmoor**

5.12 This purpose forms the basis for maintaining the existing settlement pattern. The review assessed each parcel against the following criteria:

- the strategic significance of the wider Green Belt area;
- the existing width of the Green Belt gap and the impact development would have on the role the gap plays, particularly in landscape terms; and
- whether development would appear to result in the merger of built up areas, including those located in neighbouring authorities

5.13 The following was used to attribute a score to each parcel (see Table 4):

**Table 4: Purpose 2 Scoring Criteria**

Score	Criteria
<b>A</b> Zero impact	would be where:–
<b>B</b> Minor impact which can be mitigated	<ul style="list-style-type: none"> <li>The impact of development has had a minor or zero impact on the overall distance between settlements</li> <li>The character and identity of separate settlements had altered little as a result of the proposed development</li> <li>Existing Green Belt boundary has permitted unrestricted ribbon development, which has perceptibly reduced the gap between settlements</li> </ul>

<b>C</b>	Moderate impact, which can be mitigated	one or more of the following circumstances may be evident: <ul style="list-style-type: none"> <li>• The impact of development has had a considerable impact on the overall distance between settlements</li> <li>• The character and identity of separate settlements had altered as a result of the proposed development</li> <li>• Existing Green Belt boundary has resisted ribbon development in part which could have perceptibly reduced the gap between settlements</li> </ul>
<b>D</b>	Moderate overall adverse impact / some mitigation feasible	
<b>E</b>	Major overall adverse impact	one or more of the following circumstances may be evident: <ul style="list-style-type: none"> <li>• The impact of development would significantly, perceptually, visually or physically reduce the perceived distance between settlements to an unacceptable degree</li> <li>• The character and identity of separate settlements had altered significantly and would therefore prejudice the integrity of the Green Belt</li> <li>• Existing Green Belt boundary has resisted ribbon development which could have perceptibly reduced the gap between areas outlined above</li> </ul>

### Purpose 3 - Assist in Safeguarding the Countryside from Encroachment

5.14 This purpose seeks to safeguard the countryside, which is enjoyed for openness. The review assessed each parcel against the following criteria:

- the character of land in relation to its existing setting, i.e. does it comprise urban fringe land (with existing significant urbanising influences) or is it considered to be part of wider open countryside;
- the degree of 'openness' or containment provided by the relationship with the built up area;
- the presence of a strong physical boundary separating open countryside from the built up area or one separating the review area from the wider Green Belt area beyond
- Whether an existing area is already 'built-up' and impacts upon Green Belt openness (effectively an existing encroachment to the otherwise open countryside).

5.15 The following was used to attribute a score to each parcel (see Table 5)

**Table 5: Purpose 3 Scoring Criteria**

Score		Criteria
<b>A</b>	Zero impact	would be where:–
<b>B</b>	Minor impact which can be mitigated	<ul style="list-style-type: none"> <li>• the parcel provides urban fringe or lies within the confines of the main built-up area or settlement</li> <li>• provides a minor or zero role in terms of supporting overall countryside openness</li> <li>• provides a weak boundary to the main built-up area</li> <li>• the area already acts as a minor developed area in its own right and provides an existing encroachment to the otherwise open countryside.</li> </ul>

<b>C</b>	Moderate impact, which can be mitigated	one or more of the following circumstances may be evident: <ul style="list-style-type: none"> <li>the parcel supports both the openness of the wider countryside and also has an element of urban fringe</li> <li>The existence of a moderate to strong physical boundary separates open countryside from the built-up area.</li> </ul>
<b>D</b>	Moderate overall adverse impact / some mitigation feasible	
<b>E</b>	Major overall adverse impact	one or more of the following circumstances may be evident: <ul style="list-style-type: none"> <li>the parcel is physically separate from the urban area</li> <li>the parcel significantly supports the openness of the wider countryside.</li> <li>The existence of a very strong physical boundary separates open countryside from the built-up area.</li> </ul>

#### Purpose 4 - Preserve the Special and Separate Characters of Springwell Village and Newbottle Village

5.16 The NPPF purpose serves to protect the setting of historic settlements by retaining the surrounding open land or by retaining the landscape context for historic features. In Sunderland this specifically relates to Springwell Village and Newbottle Village, therefore the purpose is relevant to limited parts of the city's Green Belt only. The review assessed each parcel against the following criteria:

- Whether there are views and links to the settlements and whether the land has an impact upon the special character and setting of the settlements
- The degree to which the development would impact on the existing historic settlement form
- If there is a significant relationship with the setting or character of a conservation area, listed building or an important historical feature within the settlements.

The following was used to attribute a score to each parcel (see Table 6)

**Table 6: Purpose 4 Scoring Criteria**

Score		Criteria
<b>A</b>	Zero impact	would be where:– <ul style="list-style-type: none"> <li>The development would have a limited or zero impact upon the special character and setting of the settlements</li> <li>The development would not impact upon the most historic features of the settlement or key features but could have minor impacts on key features outlined in a Conservation Area Management Plan</li> <li>The development would have limited or zero impact upon the setting or character of a conservation area, listed building or an important historical feature within the settlements.</li> </ul>
<b>B</b>	Minor impact which can be mitigated	
<b>C</b>	Moderate impact, which can be mitigated	one or more of the following circumstances may be evident: <ul style="list-style-type: none"> <li>The development would have a considerable impact upon the special character and setting of the settlements</li> <li>The development would not directly impact upon the most</li> </ul>
<b>D</b>	Moderate overall	

	adverse impact / some mitigation feasible	<p>historic features of the settlement or key features but would nevertheless have considerable impacts on key features outlined in a Conservation Area Management Plan</p> <ul style="list-style-type: none"> <li>The development would considerably impact upon the setting or character of a conservation area, listed building or an important historical feature within the settlements.</li> </ul>
<b>E</b>	Major overall adverse impact	<p>one or more of the following circumstances may be evident:</p> <ul style="list-style-type: none"> <li>The development would have a fundamental and substantial impact upon the special character and setting of the settlements</li> <li>The development would directly impact upon the most historic features of the settlement or key features outlined in a Conservation Area Management Plan</li> <li>The development would significantly impact upon the setting or character of a conservation area, listed building or an important historical feature within the settlements.</li> </ul>

### Purpose 5 - Assist in Urban Regeneration, by Encouraging the Recycling of Derelict and Other Urban Land

- 5.17 Assessing parcels against this purpose would not enable a distinction between parcels. Therefore, the review assessed each parcel against the following criteria:
- Is the land brownfield itself (previously developed land or forming an existing built-up area)?
  - Could the land be considered to be part of the urban area?

The following was used to attribute a score to each parcel (see Table 7):

**Table 7: Purpose 5 Scoring Criteria**

Score	Criteria
<b>A</b>	Forms part of a built up area, brownfield land
<b>B</b>	Greenfield land within a built up area, or brownfield land in urban fringe
<b>C</b>	Greenfield land in urban fringe or brownfield land in open countryside
<b>D</b>	Greenfield land in open countryside

Appendix 1 assesses each site.

### Stage 2 – Assessment of Physical and Policy Constraints

- 5.18 The purpose of Stage 2 of the review is to identify if any parcels are constrained by Category 1 constraints and therefore are unsuitable for development.
- 5.19 Category 1 constraints are nationally protected designations, and are considered to likely have a significant impact on development. This approach is aligned to the Sunderland Strategic Housing Land Availability Assessment.
- 5.20 Mapping of absolute constraints thus enabled the identification of the least suitable potential development locations, by identifying those areas which are subject to policy

restrictions, and which would therefore require very strong or exceptional justification to be included as a preferred location for sustainable growth. A full list of category 1 constraints, including the rationale for the constraint, is provided in Table 8.

**Table 8: Category 1 Constraints**

Category	Commentary
Sites of Special Scientific Interest	Aligns with NPPF (paragraph 118), which states that development within SSSIs would not normally be permitted unless exceptional circumstances could be demonstrated. SSSIs are protected under the Wildlife and Countryside Act 1981. Given their role in nature conservation, SSSI's are highly unlikely to be suitable for development.
Ramsar sites	Aligns with NPPF (paragraph 118), which accords Ramsar sites the same level of protection as other European sites. Thus as per sites designated under the Habitats Directive, Ramsar sites are considered inappropriate for development.
Special Protection Areas (SPAs)	Area accorded high level of protection under the European Union's Habitat Directive. Development within the SPA and associated 400m buffer considered inappropriate for residential development.
Special Areas of Conservation (SACs)	Area accorded high level of protection under the European Union's Habitat Directive. Development within a SAC considered inappropriate for development.
National Nature Reserves (NNRs)	Area of national importance, designated by Natural England. NNRs have the highest level of conservation protection available under UK legislation
Scheduled Ancient Monuments	Aligns with NPPF (paragraph 132), which states substantial harm or loss to Scheduled Monuments should be wholly exceptional. Therefore considered inappropriate for development.
Health and Safety Executive Inner Zones	The Health & Safety Executive uses a 3 zone approach with regards to development proposals in the vicinity of an identified major hazards/installation. The risks and hazards from the major hazard are greatest in the inner zone so the restrictions on development are strictest.
Areas identified as Flood Zone 3	Aligns with NPPF (paragraph 100), which emphasises that the sequential test should be applied to avoid inappropriate development in areas of flood risk. A high probability of flooding within Flood Zone 3b, therefore not suitable for residential development.
Ancient Woodland	Aligns with NPPF (paragraph 118), which accords a high level of protection to Ancient Woodland unless exceptional circumstances could be demonstrated. Given their role in nature conservation, ancient woodland is highly unlikely to be suitable for development.

## Call Out for Sites Review (in conjunction with Stage 2)

5.21 The purpose of this Call Out for Sites Review has been to look at all of the sites in the Green Belt that have been submitted for consideration for development through the various rounds of consultation. Throughout the preparation of the Local Plan, developers and landowners have submitted sites to the Council which are in the Green Belt. As part of the Strategic Land Review and SHLAA process, 65 sites have been submitted as sites considered as being suitable for development. These sites in most instances are different to the land parcels identified by the Council at Stages 1 and 2. Therefore, the Council has assessed these sites.

5.22 Each site submitted has been given a reference number and assessed by:

- Identifying whether they are affected by fundamental constraints (known as Category 1 Designations); and then
- The area of the site not affected by Category 1 Designations was re-tested against the five purposes of the Green Belt. This included an analysis of the site's defensible Green Belt boundaries.

5.23 If a site is not deemed to have a major impact to Green Belt purpose and is not significantly affected by Category 1 Designations, then it will be considered as part of the Site Selection process. Likewise, those sites that are found to fundamentally impact on Green Belt purpose and/or be significantly affected by Category 1 designations will be discounted at this stage.

5.24 The assessment of each site is included in Appendix 2.

## 6. Conclusion

### Stage 1 - Green Belt Review – Assessment of Green Belt Purpose

- 6.1 Stage 1 of the Green Belt Review (published in May 2016) concluded that 63% of the Green Belt that should be retained without further examination at Stage 2, as this land was clearly identified as being fundamental to the purposes of the Tyne and Wear Green Belt. The conclusion acknowledged that there could be minor parcels of land within these areas (particularly if connected to an urban area) that may warrant further consideration.
- 6.2 The remaining 37% was brought forward and considered at Stage 2 of the Green Belt Review. These areas primarily constitute urban fringe, which in most cases still demonstrate strong support and relevance to Green Belt purpose.
- 6.3 The Council received 37 representations to the Stage 1 Green Belt Review<sup>1</sup>. In addition, the Council received 4 representations from landowners/developers promoting land parcels with different boundaries to the Stage 1 Report.

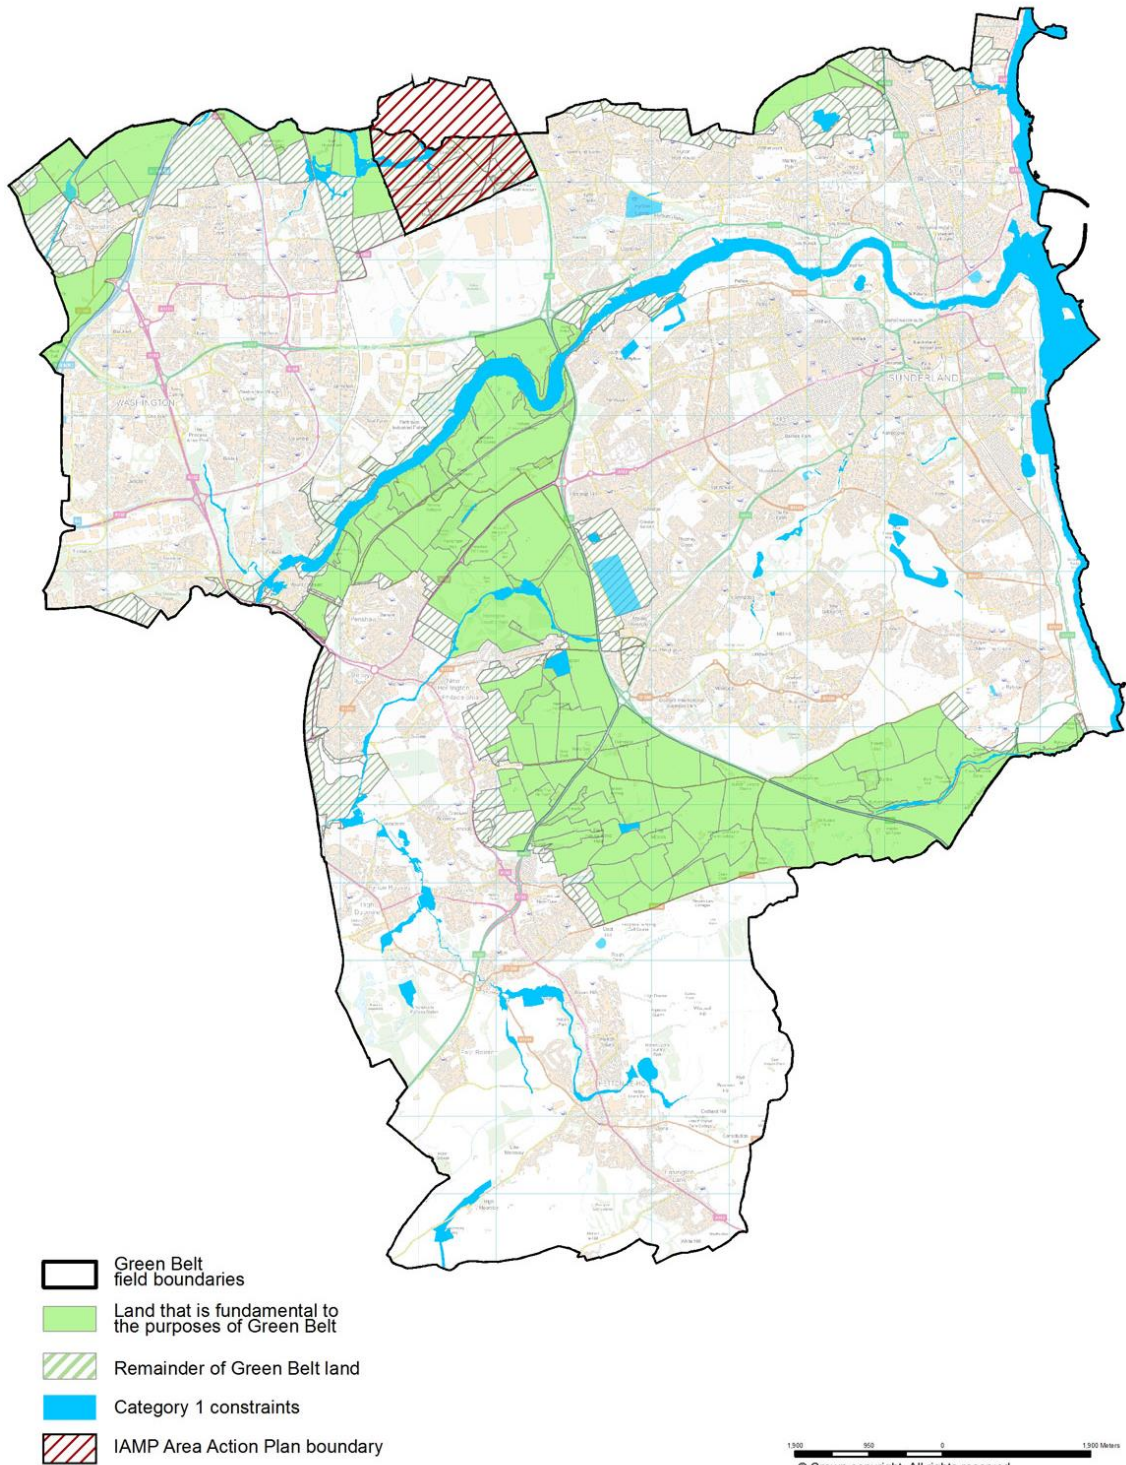

### Green Belt Review Stage 1 Update and Stage 2 Constraints Assessment

- 6.4 In line with best practice advice from Arup consultants, it was agreed that this report would carry out a review of Stage 1 as well as an identification of Category 1 constraints within the Green Belt. This is detailed in Appendix 1. Further detailed information was provided to clarify the overall review approach as well as the assessment of Green Belt parcels of land.
- 6.5 The updated Stage 1 results concluded that 67% of the Green Belt should be retained because it is considered to be fundamental to supporting Green Belt purpose (see Map 4, below). This now includes a number of hamlets and minor built-up areas within the open countryside that were originally recommended at Stage 1 for further consideration. The results for each Green Belt purpose are shown on Maps 5-9, below). These areas are too small to be considered a 'village'. The NPPF refers only to villages as having the potential to be inset from the Green Belt, and as such, these are now proposed to remain washed-over by the Green Belt as they demonstrate fundamental support to Green Belt purpose.
- 6.6 Beyond these areas of Green Belt, a further 2% of land is directly affected by a Category 1 constraint.
- 6.7 These results have helped to inform site selection assessment set out within this report.

## Call Out for Sites Review

6.8 Of the 65 submissions received, some areas had been identified as fundamental to the purposes of the Green Belt. This report demonstrates that 27 submissions have either a major impact on the purposes of Green Belt and/or directly (to more than a marginal extent) impact on Category 1 designation(s) – see Map 10, below. As a result, these sites have been excluded from the subsequent Site Selection Report, raising the total of Green Belt excluded to 73%. The remaining 36 sites and the land parcels that were not discounted by either the Stage 1 or 2 Reviews or the Call Out for Sites have been assessed via the Green Belt Site Selection Report.

## 7. Next Steps

7.1 The following sites have been assessed to be not fundamental to the Green Belt and therefore will be assessed for their suitability, sustainability and deliverability in Stage 3 of the Green Belt Review. The outcome of Stage 3 will be to identify those sites which should be allocated in the Draft CSDP to meet the shortfall in the land required to meet Sunderland's Objectively Assessed Need.

**Table 9: Submitted Sites and Green Belt Parcels to be Assessed at Stage 3**

### Stage 3: Green Belt Site Selection Report

7.2 The report will consider the most suitable, sustainable and deliverable sites currently designated as Green Belt. This is based on land that has been tested against Stage 1 and Stage 2 Green Belt Reviews (and, where relevant, the Call Out for Sites Review) and has been put forward for further consideration at this stage. This report objectively assesses sites to identify the most sustainable and suitable sites to be allocated for housing. These sites will require release from the Green Belt to enable them to come forward for development, and are fundamentally necessary to the successful delivery of the overall strategy.

### Stage 3: Green Belt Boundary

7.3 In accordance with national policy, it is important, where practicable, to utilise clear, strong physical features that are readily recognisable and likely to be permanent. In a few cases it may not be possible for the revised Green Belt boundary to follow a specific feature in existence on the ground. In these cases the boundary is identified as straight line between two points that can be identified on the ground and there will be policy requirement to ensure following development a strong and defensible boundary.

- 7.4 In addition, the NPPF requires local planning authorities to satisfy themselves that Green Belt boundaries will not need to be altered at the end of the development plan period and where necessary, identify areas of 'safeguarded land' between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period.
- 7.5 The Site Selection Report has identified a number of proposed sites for Green Belt deletion, and these sites will alter the Green Belt boundary accordingly. Following consultation on this report and the Draft CSDP, the Council will undertake a more detailed review of the Green Belt boundary to ensure that all boundaries are defensible and capable of enduring beyond the plan period. This will include:
- determining changes that result from the need to establish a new boundary where it is proposed to delete land from the Green Belt to meet housing, employment or other needs for land for built development;
  - taking account of physical changes that have occurred since the last boundary review;
  - including or excluding small pieces of land contributing or not contributing, respectively, to the purposes of the Green Belt;
  - defining boundaries using physical features that are readily recognisable and are likely to be permanent; and
  - Eliminating any very minor boundary anomalies to the detail.

# Appendix 1 - Green Belt Review Stage 1 Update and Stage 2 Constraints Assessment

## 1. Redhouse and Fulwell

This portion of Green Belt is located on the north side of Sunderland, and forms part of a wider swathe of Green Belt that extends northwards into South Tyneside. It helps to physically separate Sunderland from South Tyneside. The Green Belt helps to create a strategic Green Infrastructure corridor from the North Sea inland to the River Don floodplain and edge of the Magnesian Limestone Escarpment.

For the most part, the Green Belt connects directly to the north Sunderland residential boundary, though there are a few exceptions at: Town End Farm (greenfield land site allocated for housing); football pitches at Redhouse; parts of Fulwell Quarries greenspace; Monkwearmouth Secondary School playing fields; Mere Knolls Cemetery, and; Seaburn Camp.

The Green Belt in Sunderland forms an urban fringe landscape typified by sports pitches, allotments, amenity and natural greenspace. Immediately to the north of the city boundary, however, the Green Belt has a more rural feel and is dominated by agricultural land.

There has been very little change to the Green Belt since the last boundary modifications in the 1998 UDP, other than the redevelopment of the former

abattoir site into housing on Shields Road. Some changes have taken place within the sports areas of Fulwell Quarries and Downhill Sports Complex, in terms of the types of sports pitches on offer. There has been limited development or change to land adjacent to

the Green Belt, apart from a minor new housing development beside Whitchurch Road, Witherwack.

For the most part, the Green Belt between Sunderland and South Tyneside is between 900m and 1500m wide, except between South Bents and Whitburn where the gap is less than 250m.

As a whole, this section provides an important contribution to the wider Green Belt area that prevents the city from merging with South Tyneside, as well as safeguarding against countryside encroachment and checking urban sprawl. In landscape terms, Sunderland’s narrow portion of Green Belt incorporates a low limestone ridge that further helps to separate the two districts.

In more specific terms, however, the greenfield sites dotted along the city’s northern boundary throw into question whether the most appropriate Green Belt boundary still exists. At Downhill Sports Complex and Fulwell Quarries, for example, the Green Belt divides some greenspaces.

### Redhouse and Fulwell Stage 1 Assessment

The following parcels have been assessed against the Green Belt purposes: RE1, RE2, RE3, RE4, RE5, RE6, RE7, RE8, RE8, RE9, RE10, RE11, RE12, RE13, RE14, RE15, RE16, RE17, RE18.

#### Green Belt Purposes

1. Check the unrestricted sprawl of the built-up area of the city
2. Preventing neighbouring towns merging into one another (in this case, Sunderland and South Tyneside)
3. Assist in safeguarding the countryside from encroachment
4. Preserve the setting and special character of Springwell Village and Newbottle Village
5. Assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

## Conclusions of Stage 1

Criteria	Assessment
1	The majority of the Redhouse and Fulwell Green Belt forms urban fringe. Parcels RE6, RE9 and RE10 provide open countryside, distanced from the urban area. Parcels RE5 and RE7 provide greenspace relating to Witherwack. Parcel RE12 is an urban area
2	The Green Belt within this Redhouse and Fulwell area appears narrow, but forms part of a much wider area of Green Belt in South Tyneside.
3	Most of the area is urban fringe, though still making an important contribution to the openness of the wider countryside. Parcel RE12 constitutes an urban area
4	No impact to this purpose
5	Most of the land comprises greenfield sites within the urban fringe. Parcel RE7 constitutes greenfield land within the urban area. Parcel RE12 is a built up area.

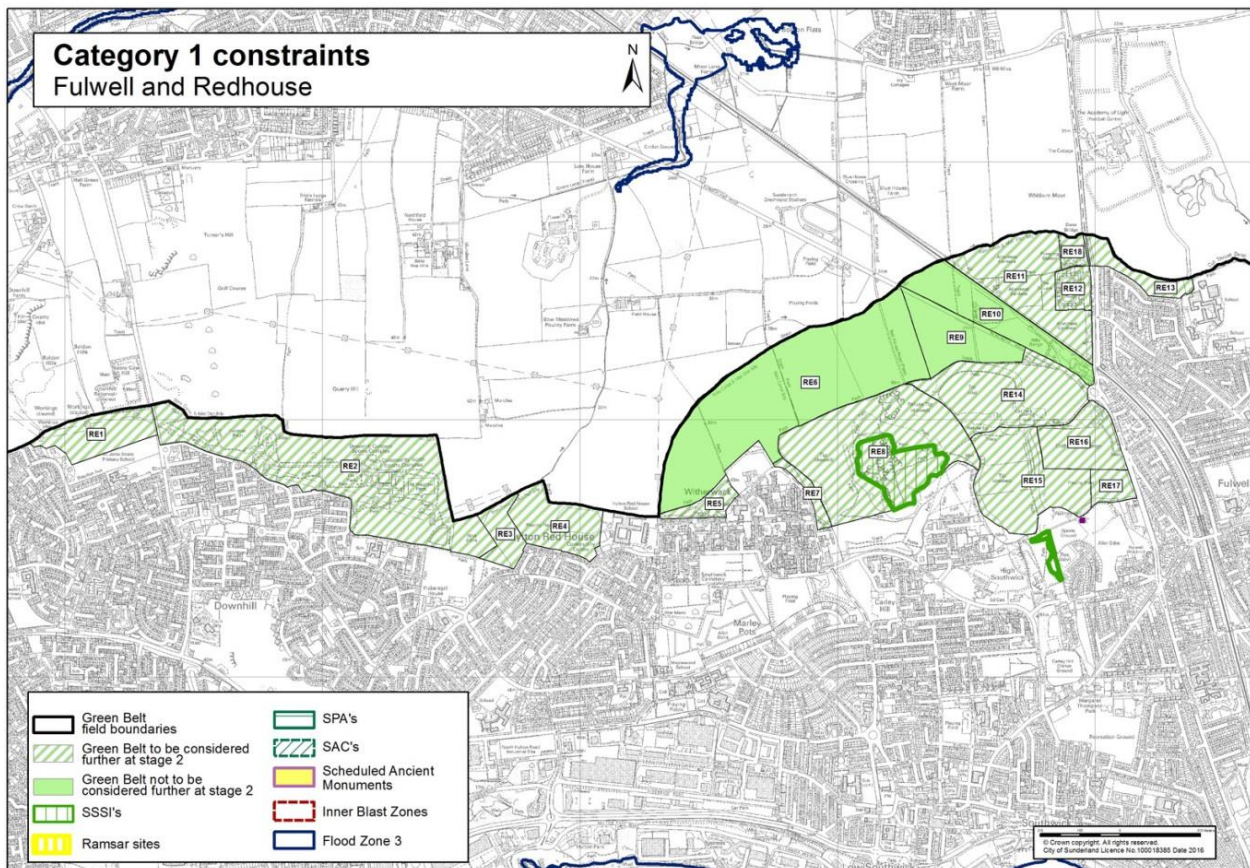

The following Parcels are considered to be fundamental to the purpose(s) of the Sunderland Green Belt and are recommended for full retention, without any further consideration required at Stage 2: RE6, RE9, RE10.

All 3 Parcels form open countryside beyond the urban fringe, contributing to the openness of the Green Belt extending into the Boldon Flatts landscape. If developed, it would constitute urban sprawl with little opportunity for rounding-off, and create a major incursion into the Green Belt.

The following parcels will be assessed at stage 2: RE1, RE2, RE3, RE4, RE5, RE7, RE8, RE11, RE12, RE13, RE14, RE15, RE16, RE17, RE18.

## Redhouse and Fulwell Stage 2

## 2. Nissan

This portion of Green Belt is located between Sunderland and Washington, and forms part of a wider swathe of Green Belt that extends northwards into South Tyneside. It helps to physically separate Sunderland from Washington, and the city generally from South Tyneside. The Green Belt supports a strategic Green Infrastructure corridor along the River Don and Usworth Burn that links to further corridors to Gateshead and the coast.

The Green Belt boundary is distinct, closely following the former Leamside Line, Washington Road and the A19.

The Green Belt forms a semi-rural lowland landscape, typified by farmland. The Green Belt gap between Sunderland and Washington is approximately 2,750m in width, and northwards between Nissan and South Tyneside it varies from 2km and 4km in width.

There has been very little change to the Green Belt since the last boundary modifications in the 1998 UDP, other than a recent development of a nursery beside Severn Houses. Immediately to the south of the Green Belt, however, there has been considerable industrial (and housing) development within the employment areas of Nissan and Pattinson, and these areas continue to grow.

As a whole, this section provides an important contribution to the wider Green Belt that separates the city from South Tyneside. However, the strategic purpose of separating Sunderland and Washington is already weakened by the existing employment land

associated with the Nissan Motor Manufacturing complex, which in effect already bridges the gap between the two urban areas. A further role of this Green Belt has been to support a north-south green infrastructure corridor to the River Wear, but this has also been weakened by recent development between Nissan and Pattinson.

### IAMP Area

In conjunction with this report, a separate Green Belt study has been commissioned for this area by Sunderland and South Tyneside Councils. Originally, this entire area was subject to an NSIP (Nationally Significant Infrastructure Project) to consider the proposal to develop the International Advanced Manufacturing Project (IAMP) within this Green Belt area. This IAMP and NSIP boundary now focuses on the eastern half of the North of Nissan sub-area and is being addressed as part of an Area Action Plan. A separate Green Belt report has been produced for the IAMP study, and this report will be solely used to inform Green Belt assessment for this particular area. This report recommends a new Green Belt boundary, which narrows the Green Belt gap between Washington and Sunderland significantly. The remaining Green Belt land to the west of the AAP (and to the east of the Leamside Line) remains as part of this study. Specifically, this relates to Parcels NI1, NI2, NI5, NI6, NI10, NI11, NI12 and NI13.

### Nissan Stage 1 Assessment

The following parcels have been assessed against the Green Belt purposes: NI1, NI2, NI5, NI6, NI10, NI11, NI12, NI13.

#### Green Belt Purposes

1. Check the unrestricted sprawl of the built-up area of the city
2. Preventing neighbouring towns merging into one another (in this case, Sunderland and South Tyneside)
3. Assist in safeguarding the countryside from encroachment
4. Preserve the setting and special character of Springwell Village and Newbottle Village
5. Assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

Criteria	Parcels							
	NI1	NI2	NI5	NI6	NI10	NI11	NI12	NI13
1	E	E	D	E	D	C	D	D
2	C	D	C	D	D	D	D	D
3	E	E	D	E	D	D	D	D
4	A	A	A	A	A	A	A	A
5	D	D	D	D	D	C	D	D

## Conclusions of Stage 1

Criteria	Assessment
1	The Leamside Line and A1290 provide distinct boundaries with the built-up area, and as a result there is no clear potential for rounding-off of the existing built-up area. Parcel NI11 has more opportunity for rounding-off, but still represents protrusion into wider Green Belt.
2	This section of the green belt plays an important role in preventing the merging of South Tyneside with Washington, and Washington with Sunderland.
3	The area significantly support the openness of the countryside, consisting of land that is largely separate from the urban area, and has strong physical boundaries separating open countryside from the built-up area.
4	No impact to this purpose
5	Most of the land comprises greenfield sites within the open countryside.

The following Parcels are considered to be fundamental to the purpose(s) of the Sunderland Green Belt and are recommended for full retention, without any further consideration required at Stage 2: NI1, NI2, and NI6

The above 3 Parcels are physically separate from the urban area, forming open countryside that significantly contributes to the openness of the Green Belt (extending into the River Don landscape). If developed, it would constitute urban sprawl with little or no opportunity for rounding-off.

The following parcels will be assessed at stage 2: NI5, NI10, NI11, NI12, NI13.

## Nissan Stage 2

Parcel	Stage 2 Assessment	Conclusion
NI5	Much of area affected by Flood Zone 3	Discounted
NI10	No category 1 designations	Assess at site selection
NI11	No category 1 designations	Assess at site selection
NI12	No category 1 designations	Assess at site selection
NI13	No category 1 designations	Assess at site selection

### 3. Usworth

This portion of Green Belt is located to the north of Washington, and forms part of a wider swathe of Green Belt that extends northwards to physically separate the New Town from Gateshead and South Tyneside. The Green Belt helps to form a strategic Green Infrastructure corridor linking west-east between Springwell Village and the area north of Nissan.

The Green Belt boundary with Washington is distinct and closely follows the built-up area. It forms an urban fringe landscape typified by a golf course and sports fields, with a limited amount of agricultural land.

There has been very little change to the Green Belt since the last boundary modifications in the 1998 UDP, other than the development of car parking associated with the George

Washington Hotel Golf Course. There has also been little further development or change in North Washington.

The Green Belt between Washington and Gateshead is approximately 1.3km in width. Immediately to the north, however, the gap from Washington to Follingsby is presently about 950m, which will reduce down to 500m once Follingsby South employment area (within Gateshead MBC) is developed. The Green Belt is approximately 3km in width between Washington and South Tyneside.

As a whole, this section provides a significant proportion of Green Belt that prevents Washington and Gateshead from merging, as well as safeguarding countryside encroachment and avoiding urban sprawl. The Green Belt development at Follingsby further strengthens the need to retain the city's portion of Green Belt, particularly the need to maintain the east-west green infrastructure corridor which is strongly associated with the Usworth Burn and River Don.

## Usworth Stage 1 Assessment

The following parcels have been assessed against the Green Belt purposes: US1, US2, US3, US4, US5, US6.

### Green Belt Purposes

1. Check the unrestricted sprawl of the built-up area of the city
2. Preventing neighbouring towns merging into one another (in this case, Sunderland, Gateshead and South Tyneside)
3. Assist in safeguarding the countryside from encroachment
4. Preserve the setting and special character of Springwell Village and Newbottle Village
5. Assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

Criteria	Parcels					
	US1	US2	US3	US4	US5	US6
1	D	E	D	E	E	D
2	D	D	D	C	D	D
3	C	E	D	D	E	D
4	A	A	A	A	A	A
5	C	D	C	C	D	C

### Conclusion Stage 1

Criteria	Assessment
1	This area of the Green Belt has an important role in preventing the unrestricted sprawl of the Washington area. There is little opportunity for rounding off and development would result in significant protrusion into the wider Green Belt.
2	The Parcels adjoining the boundary with Gateshead play an important role in preventing the merging of Gateshead and Washington; their development would narrow the Green Belt significantly and prejudice its integrity.
3	Although having an urban fringe location, Parcels US3, US4, and US6 have an important role in supporting the openness of the wider countryside. Parcel US1 has more of an urban fringe use, whereas Parcels US2 and US5 are considered to be open countryside.
4	No impact to this purpose
5	Parcels US1, US3 and US6 are greenfield sites on the urban fringe, Parcel US4 is a brownfield site within the open countryside, whereas Parcels US2 and US5 are greenfield sites within the open countryside.

The following Parcels are considered to be fundamental to the purpose(s) of the Sunderland Green Belt and are recommended for full retention, without any further consideration required: Parcels US2, US4, US5.

All 3 Parcels form open countryside beyond the urban fringe, contributing to the openness of the Green Belt extending into the River Don landscape. If developed, it would constitute urban sprawl with little opportunity for rounding-off, and would significantly prejudice the integrity of the Green Belt gap between Washington and Follingsby.

The following parcels will be assessed at stage 2: Parcels US1, US3, US6.

### Usworth Stage 2

Parcel	Stage 2 Assessment	Conclusion
--------	--------------------	------------

US1	Partly affected. A limited proportion of land beside the River Don falls within Flood Zone 3	Assess at site selection
US3	No category 1 designations	Assess at site selection
US6	Partly affected. Usworth Burn lies within Flood Zone 3 (southeast corner of Parcel US6).	Assess at site selection

## 4. Springwell Village

This portion of Green Belt is located to the north-west of Washington, and south-east of Gateshead, fully surrounding Springwell Village. It helps to physically separate Washington from Gateshead. The hamlet of Mount Lonnen lies fully within the Green Belt. The Green Belt helps to create a strategic Green Infrastructure corridor from Lamesley and Birtley north-east to Follingsby and Boldon.

The Green Belt extends westwards and north-eastwards into Gateshead and South Tyneside. The Green Belt boundary is distinct as it follows the A194(M) to the south and Leam Lane to the far north. The boundary is less distinct near to Wrekenton, following the residential boundary but including the Camp Ground Refuse Disposal Works within the Green Belt. The Green Belt boundary also closely follows the residential boundary of Springwell Village, although it includes a couple of properties within the Green Belt to the east at Peareth Hall Road.

The Green Belt forms a mixture of rural and urban fringe landscape. The south, east and far north is dominated by undulating farmland with extensive vistas, and has a rural feel. To the west, and immediately beside Springwell Village, is a mixture of horse paddocks, pasture, a quarry, sports pitches and the refuse works, together with the residential area of Mount Lonnen.

There has been very little change to the Green Belt since the last boundary modifications in the 1998 UDP, other than land reclamation at Springwell Quarry that has created natural greenspace between Springwell Lane and Eighton Banks. There has also been little further development or change to the areas beside the Green Belt, apart from an infill housing development on the former Volker Stevin engineering site.

The gap between Washington and Springwell Village is in places upwards of 400m in width, but narrows to a point at Peareth Hall Road where technically the two settlements are joined; only isolated from each other by the A194(M). This stretch of the A194(M) to the north west of Washington emphasises the feeling of separation between the two

communities. The gap between Springwell and Wrekenton (Gateshead) is over 670m in width, though this partly includes Springwell Quarry and the Camp Ground site.

As a whole, this section provides the entire strategic separation between Washington and Gateshead, and provides a tight Green Belt boundary around Springwell Village, which was identified as the only 'historic town' specifically inset (or excluded) from the Green Belt in the 1998 UDP. Whilst the prevention of the city merging with Gateshead is a clear priority in Green Belt terms, the tight boundary encompassing Springwell Village should be considered in a wider context, particularly in ensuring that the village has the potential to retain both its distinctive identity and its local facilities over the next 20 years.

### Springwell Stage1 Assessment

The following parcels have been assessed against the Green Belt purposes: SP1, SP2, SP3, SP4, SP5, SP6, SP7, SP8, SP9, SP10, SP11, SP12, SP13, SP14, SP15, SP16.

#### Green Belt Purposes

1. Check the unrestricted sprawl of the built-up area of the city
2. Preventing neighbouring towns merging into one another (in this case, Springwell Village, Gateshead and Washington)
3. Assist in safeguarding the countryside from encroachment
4. Preserve the setting and special character of Springwell Village and Newbottle Village
5. Assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

Criteria	Parcels															
	SP1	SP2	SP3	SP4	SP5	SP6	SP7	SP8	SP9	SP10	SP11	SP12	SP13	SP14	SP15	SP16
1	C	D	D	E	E	D	E	E	E	D	B	B	D	E	C	E
2	C	C	D	D	D	D	D	D	D	C	D	B	C	B	D	E
3	A	C	E	D	C	C	E	E	E	D	B	B	D	B	D	E
4	A	A	A	A	B	B	A	B	B	B	B	B	B	B	B	B
5	B	C	C	D	C	C	D	D	D	C	B	C	C	A	C	D

#### Conclusions of Stage 1

Criteria	Assessment
1	This section of the Green Belt plays an important role in preventing the unrestricted sprawl of the built up areas. There is scope for some rounding off of the Green Belt at Parcels SP11 and SP12. Parcel SP14 constitutes the separate urban area of Mount Lonnen.
2	For the majority of the Parcels, development would have a significant impact upon the width of the Green Belt. Parcel SP12 has a more minor role in preventing built up areas from merging. Parcel SP14 is already built up and has

	very limited scope for further development sprawl.
3	Large areas of this section of the Green Belt are open countryside. Smaller parcels of land immediately adjacent to Springwell Village and Wrekenton comprise urban fringe. Parcel SP14 constitutes built development.
4	The Parcels surrounding Springwell Village contribute to its setting and character.
5	Most of the Parcels are greenfield sites within the urban fringe or open countryside. Parcel SP6 is a brownfield site within the open countryside. Parcel SP11 is considered to be a mix of greenfield and brownfield land, and partly forms the urban area. Parcel SP14 constitutes a built up area.

The following Parcels are considered to be fundamental to the purpose(s) of the Sunderland Green Belt and are recommended for full retention, without any further consideration required: SP3; SP4; SP5; SP7; SP8; SP9; SP14; SP16.

All of the Parcels form open countryside beyond the urban fringe, contributing to the openness of the Green Belt and supporting the prominent upland landscape around Springwell Village. If developed, it would constitute urban sprawl with little opportunity for rounding-off, and create a major incursion into the Green Belt.

Parcel SP16 would effectively close the gap between Springwell Village and Sunderland, while the remainder of the Parcels would significantly prejudice the integrity of the Green Belt gap between Gateshead and Springwell Village.

The following parcels will be assessed at Stage 2: SP1, SP2, SP6, SP10, SP11, SP12, SP13, SP15.

## Springwell Village Stage 2

Parcel	Stage 2 Assessment	Conclusion
SP1	No category 1 designations	Assess at site selection
SP2	No category 1 designations	Assess at site selection
SP6	Partly affected. Provides a boundary and setting to the Bowes Railway which is a Scheduled Ancient Monument.	Assess at site selection

SP11	No category 1 designations	Assess at site selection
SP12	Partly affected. Provides a boundary and setting to the Bowes Railway which is a Schedules Ancient Monument.	Assess at site selection
SP13	Partly affected. Provides a boundary and setting to the Bowes Railway which is a Scheduled Ancient Monument.	Assess at site selection
SP15	No category 1 designations	Assess at site selection

## 5. Hylton

This portion of the Green Belt lies to the east of the A19 within Sunderland, flanking the River Wear Estuary between North and South Hylton. The Green Belt helps to support and retain a strategic Green Infrastructure corridor along the river estuary, extending the openness of the Cox Green area into the heart of the main built-up area.

This is a relatively isolated portion of Green Belt, surrounded on three sides by urban development. The Green Belt boundary with Sunderland is fairly distinct, following the A1231 and Sunderland Enterprise Park along the north side of the river, and incorporating natural and amenity greenspace at Claxheugh and South Hylton on the south side.

Whilst the proximity of the urban area ensures that this portion of Green Belt is urban fringe, the well-wooded and steep topography is of high landscape quality, including the sheer geological limestone feature of Claxheugh Rock. Most of the eastern portion of Green Belt is protected for its biodiversity and geological value, whilst the remainder is a mixture of protected greenspace and agricultural land. The hamlet of North Hylton lies fully within the Green Belt.

There has been very little change to the Green Belt since the last boundary modifications in the 1998 UDP. There has also been little further development or change to the areas beside the Green Belt, apart from housing regeneration at South Hylton and Ford Estate, and the clearance of the former Groves site to the east of Claxheugh Riverside.

The Green Belt extends eastwards into the urban area for 1.8km from the Hylton Bridge, and varies between 250m and 500m in width.

As a whole, this section performs a key role in preventing urban sprawl to the greenfield land within the River Wear Estuary corridor, strengthening the protection given to the national and local wildlife sites and preserving the openness of the Wear valley landscape.

### Hylton Stage1 Assessment

The following parcels have been assessed against the Green Belt purposes: HY1, HY2, HY3, HY4, HY5, HY6, HY7, HY8, HY9.

#### Green Belt Purposes

1. Check the unrestricted sprawl of the built-up area of the city
2. Preventing neighbouring towns merging into one another
3. Assist in safeguarding the countryside from encroachment
4. Preserve the setting and special character of Springwell Village and Newbottle Village
5. Assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

Criteria	Parcels								
	HY1	HY2	HY3	HY4	HY5	HY6	HY7	HY8	HY9
1	E	D	E	E	D	D	C	D	D
2	A	A	A	A	A	A	A	A	A
3	E	D	D	D	D	D	D	D	D
4	A	A	A	A	A	A	A	A	A
5	D	C	C	C	C	C	C	C	C

### Conclusions of Stage 1

Criteria	Assessment
1	There is little opportunity for rounding off without a significant protrusion into the wider Green Belt. Most of the Parcels contain an urban boundary. Parcel HY7 has a long urban boundary, but has little scope for rounding off due to the impact on the riverside corridor and on isolating the Green Belt at Claxheugh.
2	This section of the Green Belt does not serve to separate any of the above, but protrudes into Sunderland along the riverside from the A19.

3	The area plays an important role in supporting the openness of the riverside as it links to the wider Green Belt. Apart from Parcel HY1, the Parcels in this area have a minor urban fringe role.
4	No impact to this purpose
5	Most of the Parcels comprise greenfield land on urban fringe or brownfield sites in the open countryside. Parcel HY1 is a greenfield site within the open countryside.

The following Parcels are considered to be fundamental to the purpose(s) of the Sunderland Green Belt and are recommended for full retention, without any further consideration required: HY1, HY3, HY4.

These parcels forms open countryside beyond the urban fringe, contributing to the openness of the Green Belt and supporting the River Wear landscape. If developed, it would constitute urban sprawl with little opportunity for rounding-off, and create a major incursion into the Green Belt.

The following parcels will be assessed at stage 2: HY2, HY5, HY6, HY7, HY8, HY9.

### Hylton Stage 2

Parcel	Stage 2 Assessment	Conclusion
HY2	No category 1 designations	Assess at Site Selection
HY5	Parcel forms part of a Local Nature Reserve that incorporates a Site of Special Scientific Interest and Local Wildlife Site. In addition, the site also forms a boundary to the River Wear Estuary, and is therefore subject to Flood Zone 3.	Discounted
HY6	Parcel forms a Local Nature Reserve and Site of Special Scientific Interest. In addition, the site also forms a boundary to the River Wear Estuary, and is therefore subject to Flood Zone 3.	Discounted
HY7	Partly affected. Parcel forms a boundary to the River Wear Estuary, and is therefore subject to Flood Zone 3.	Assess at Site Selection
HY8	Partly affected. Parcel forms a boundary to the River Wear Estuary, and is therefore subject to Flood Zone 3.	Assess at Site Selection
HY9	Much of parcel incorporates a Site of Special Scientific Interest.	Discounted

## 6. Pattinson and Low Barmston

This narrow portion of the Green Belt lies between Sunderland, Washington and Penshaw (Houghton), south of the A1231 and north of the River Wear. It helps to physically separate Sunderland, Houghton-le-Spring and Washington. The Green Belt helps to create two strategic Green Infrastructure corridors: flanking the River Wear Estuary, and; southwards from the River Wear towards Warden Law and South Hetton.

The Green Belt continues beyond this section to the south and east. The Green Belt boundary with Washington is relatively distinct, following the

edge of Pattinson North and South Industrial Estates and the A1231. The industrial land allocation includes greenfield land that adjoins the Green Belt immediately to the east of Barmston Lane (and north from Low Barmston).

The Green Belt forms a rural landscape typified by farmland and the wooded sloping valley of the River Wear. There are also activities related to the urban fringe including formal parkland, horse paddocks and the Washington Wildfowl & Wetlands Centre. The Green Belt between Sunderland and Washington varies between 1.2km and 2km in width, whilst the gap between Washington and Penshaw is just over 1km wide.

There has been very little change to the Green Belt since the last boundary modifications in the 1998 UDP, apart from Parcel PA4, which is under construction for housing. There has been considerable change along the northern Green Belt boundary as numerous employment (and more recently housing) developments have occurred within Pattinson North and South employment areas. This has impacted upon the landscape character of this part of the River Wear Estuary.

As a whole, this section provides an important contribution to the separation of Washington from Houghton and Sunderland. It also helps to prevent urban sprawl into the River Wear Estuary corridor, strengthening the protection given to the national and local wildlife sites and preserving the openness of the Wear valley landscape.

## Pattison and Low Barmston Stage I Assessment

The following parcels have been assessed against the Green Belt purposes: PA1, PA2, PA3, PA4, PA5, PA6, PA7, PA8, PA9, PA10.

### Green Belt Purposes

1. Check the unrestricted sprawl of the built-up area of the city
2. Preventing neighbouring towns merging into one another (in this case, Sunderland, Washington and Houghton-le-Spring)
3. Assist in safeguarding the countryside from encroachment
4. Preserve the setting and special character of Springwell Village and Newbottle Village
5. Assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

Criteria	Parcels									
	PA1	PA2	PA3	PA4	PA5	PA6	PA7	PA8	PA9	PA10
1	D	E	D	B	D	D	D	E	E	E
2	C	C	B	A	C	C	C	D	E	D
3	D	D	C	C	D	D	D	E	E	E
4	A	A	A	A	A	A	A	A	A	A
5	C	C	C	C	D	D	C	D	D	D

### Conclusions of Stage 1

Criteria	Assessment
1	Development of the majority of this section of the Green Belt would result in substantial protrusion into the wider Green Belt. Parcel PA4 has planning approval for housing and is currently under construction.
2	With the exception of Parcel PA4, which has zero impact on preventing built up areas from merging, development of most of the area would have some impact upon the width of the Green Belt, with Parcels PA8, PA9 and PA10 playing an important role in this respect (preventing Sunderland and Washington from merging).
3	The majority of this section of the Green Belt is considered to be part of the wider open countryside. Parcels PA3 and PA4 lie on the urban fringe, whilst Parcels PA1, PA2 and PA7 have a partial urban fringe role.
4	No impact to this purpose.
5	Parcels PA5, PA6, PA8, PA9 and PA10 are greenfield sites in the open countryside, whereas the remainder are greenfield sites on the urban fringe.

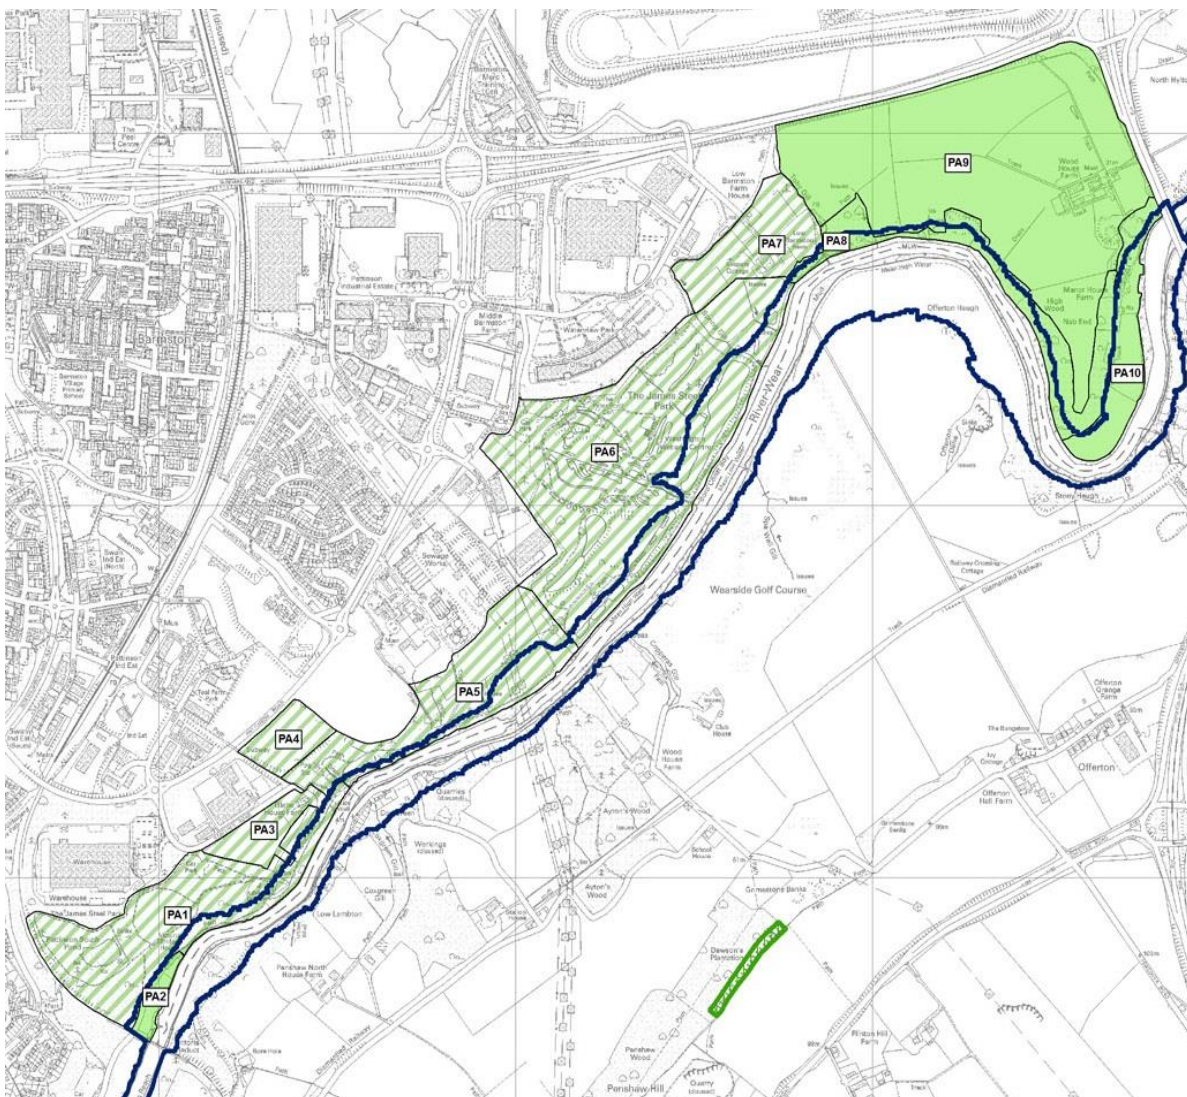

The following Parcels are considered to be fundamental to the purpose(s) of the Sunderland Green Belt and are recommended for full retention, without any further consideration required: PA2, PA8, PA9, PA10.

All of these Parcels form open countryside beyond the urban fringe, contributing to the openness of the Green Belt and supporting the River Wear landscape. If developed, it would constitute urban sprawl with little opportunity for rounding-off, and create a major incursion into the Green Belt. Parcel PA9 would effectively close the gap between Sunderland and Washington.

The following parcels will be assessed at stage 2: PA1, PA3, PA4, PA5, PA6, PA7.

### Pattinson and Low Barmston Stage 2

Parcel	Stage 2 Assessment	Conclusion
PA1	Partly affected. Parcel forms a boundary to the River Wear, and is therefore subject to Flood Zone 3.	Assess at Site Selection
PA3	No category 1 designations.	Assess at Site Selection
PA4	No category 1 designations.	Assess at Site Selection
PA5	Partly affected. Parcel forms a boundary to the River Wear, and is therefore subject to Flood Zone 3.	Assess at Site Selection
PA6	Partly affected. Parcel forms a boundary to the River Wear, and is therefore subject to Flood Zone 3.	Assess at Site Selection
PA7	No category 1 designations.	Assess at Site Selection

## 7. Fatfield and Biddick Woods

This portion of Green Belt is located to the south of Washington and west of Penshaw, and forms part of a wider swathe of Green Belt that extends southwards into County Durham and eastwards along the River Wear Estuary. It helps to physically separate Washington and Penshaw (Houghton-le-Spring). The Green Belt helps to create a strategic Green Infrastructure corridor flanking the River Wear, extending into the Lambton Estate and County Durham.

The Green Belt continues beyond this area to the north-east and south-west. The Green Belt boundary with Washington is distinct and follows the residential boundary, enveloping a number of formal and natural greenspaces. Adjacent to Penshaw, the boundary is less distinct, at times following the Leamside Line, and at other times following the residential boundary. In addition, at Penshaw Station a long street of houses (comprising Lambton and Gladstone Terraces) is fully included within the Green Belt.

The Green Belt forms an urban fringe landscape typified by wooded parkland, amenity greenspace and sports pitches, as well as pockets of agricultural land and pasture. The Green Belt between Washington and Penshaw (Houghton) is narrow, approximately 500m in width, and both Lambton and Gladstone Terraces technically join the two urban areas. Further west, the Green Belt at Harraton and Rickleton forms part of a much wider Green Belt separating Washington and Chester-Le-Street.

There has been little change to the Green Belt since the last boundary modifications in the 1998 UDP, other than the creation of the new link road at Biddick Woods that links Chester

Road and the Washington Highway, and the laying-out of formal greenspace to the east of this road. There have been a number of residential developments beside the Green Belt, however, including major developments at Biddick Woods and The General's Wood as well as at Fatfield and Station Road, Penshaw. These developments have had little impact on the Green Belt landscape, except at Biddick Woods.

As a whole, this section prevents the merging together of Washington and Penshaw (Houghton-le-Spring) and safeguards against countryside encroachment westwards into County Durham. It also helps to prevent urban sprawl into the River Wear Estuary corridor, strengthening the protection given to local wildlife sites and preserving the openness of the Wear valley landscape.

### Fatfield and Biddick Woods Stage1 Assessment

The following parcels have been assessed against the Green Belt purposes: FA1, FA2, FA3, FA4, FA5, FA6, FA7, FA8, FA9, FA10, FA11, FA12, FA13, FA14, FA15, FA16, FA17, FA18, FA19, FA20, FA21.

#### Green Belt Purposes

1. Check the unrestricted sprawl of the built-up area of the city
2. Preventing neighbouring towns merging into one another (in this case, Shiney Row with Washington, Chester-Le-Street and Bournmoor )
3. Assist in safeguarding the countryside from encroachment
4. Preserve the setting and special character of Springwell Village and Newbottle Village
5. Assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

Criteria	Parcels

4	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A
5	C	C	C	C	C	C	C	C	C	D	C	D	C	B	C	D	D	D	C	B	C

### Conclusions of Stage1

Criteria	Assessment
1	Most of this section of the Green Belt plays an important role in checking the unrestricted sprawl of the built up area of Washington and the Houghton area, with little opportunity for rounding off. Pockets that are quite well contained by the existing urban form where there is more opportunity for rounding off are

	found at Parcels FA4, FA13 and FA20.
2	The section centred around Parcels FA1-FA9, FA12 and FA13 is part of a more extensive Green Belt across the boundary in the County Durham area. The north eastern section is very narrow and plays an important role in preventing the merging of Washington with Houghton.
3	Much of the area comprises urban fringe, with the larger Parcels supporting the openness of the wider countryside.
4	No impact to this purpose.
5	Most of the area comprises greenfield sites on the urban fringe, with some greenfield sites within the open countryside. Parcels FA4, FA13, FA20 and FA21 can be considered to be greenfield sites but part of the urban area. Parcel FA14 comprises terraced housing- brownfield land that forms a built up area.

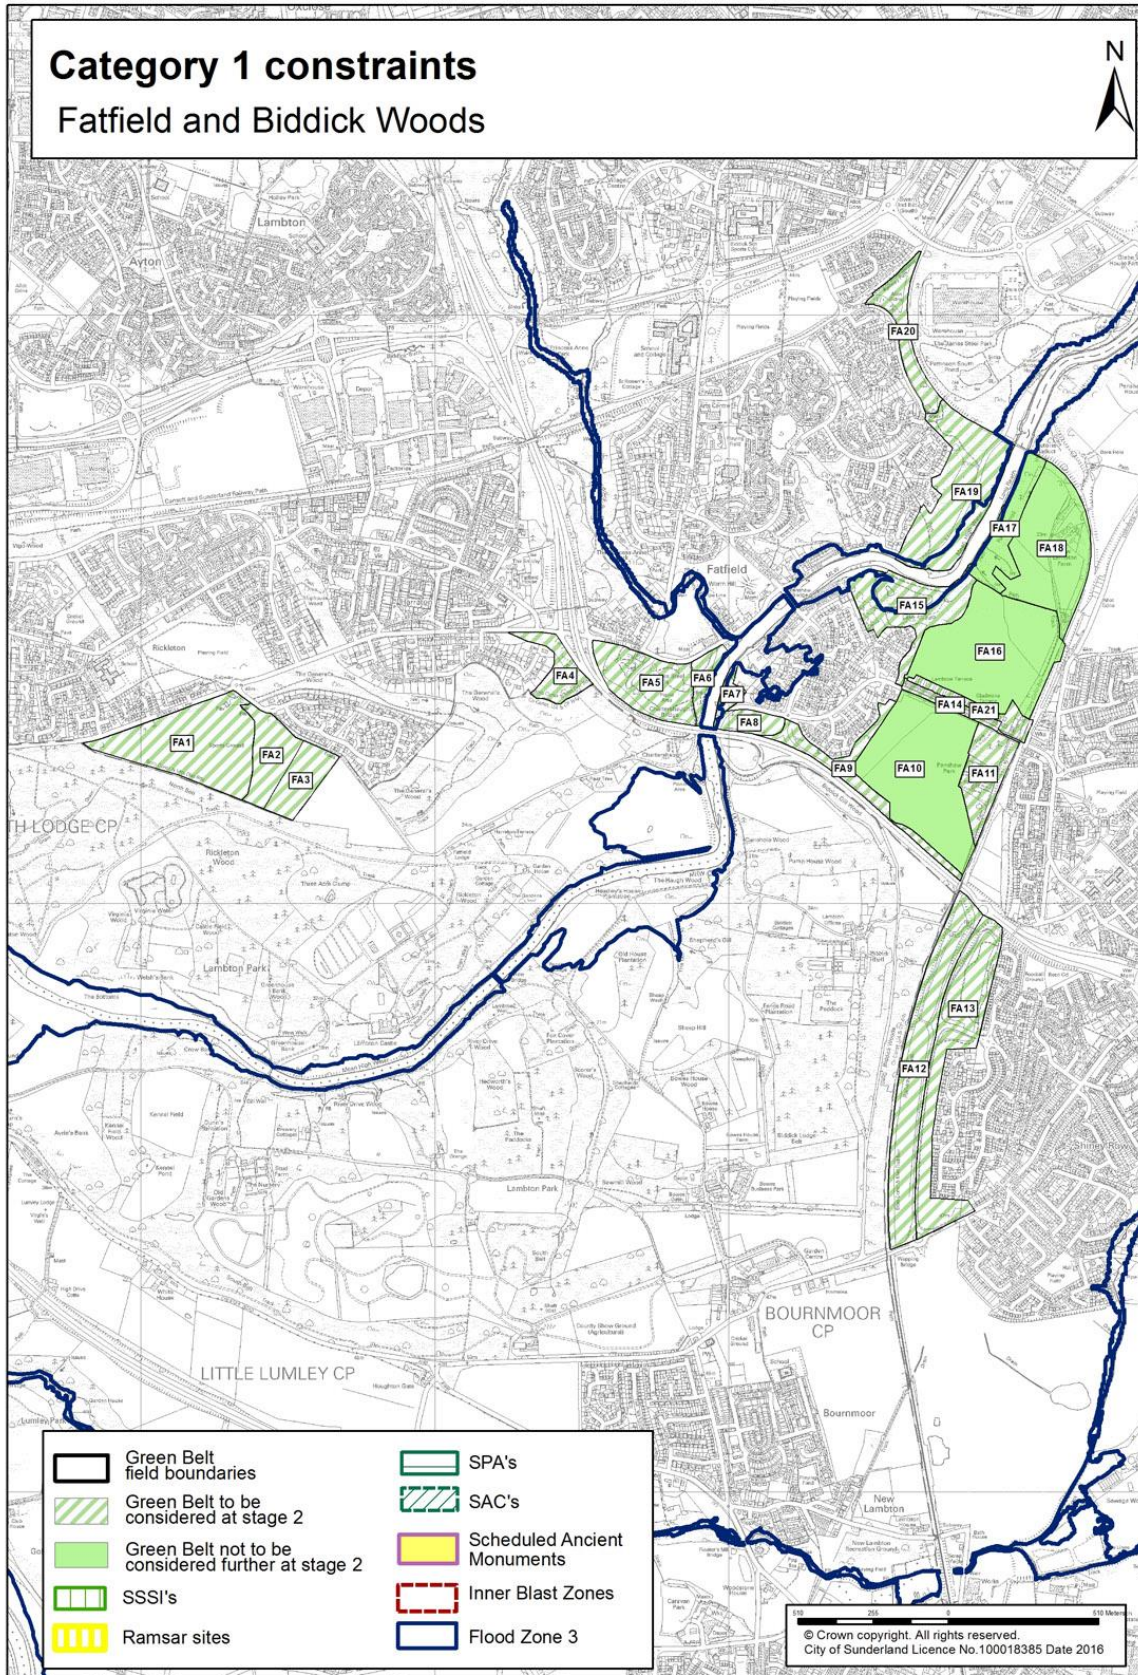

The following Parcels are considered to be fundamental to the purpose(s) of the Sunderland Green Belt and are recommended for full retention, without any further consideration required: FA10, FA16, FA17, FA18.

All of the Parcels, if developed, would constitute urban sprawl and a major protrusion into the Green Belt. Development within Parcels FA10 and FA16 would effectively close the Green Belt gap between Washington and Penshaw. Parcels FA17 and FA18 particularly form open countryside beyond the urban fringe, contributing to the openness of the Green Belt and supporting the River Wear landscape.

The following parcels will be assessed at stage 2: FA1, FA2, FA3, FA4, FA5, FA6, FA7, FA8, FA9, FA11, FA12, FA13, FA14, FA15, FA19, FA20, FA21.

## 8. Cox Green, Offerton and Penshaw Areas

This portion of the Green Belt lies between Sunderland, Penshaw and Washington, south of the River Wear and north of the A183 Chester Road. It helps to physically separate Sunderland, Houghton-le-Spring and Washington. The hamlets of Offerton and Cox Green lie fully within the Green Belt. The Green Belt helps to create two strategic Green Infrastructure corridors- one flanking the River Wear Estuary, the other running southwards towards Warden Law and South Hetton.

The Green Belt continues beyond this area to the north, west and south. The Green Belt boundary with Sunderland is distinct, following the A19. At Penshaw, the Green Belt distinctly hugs the residential area, except for the area surrounding the Leamside Line.

The Green Belt forms a rural landscape typified by

farmland, the Magnesian Limestone Escarpment and the wooded sloping valley of the River Wear. There are also activities related to the urban fringe including allotments, horse paddocks and a golf course. The Green Belt between Sunderland and Penshaw (Houghton) is over 2km wide, and more than 1km wide between Sunderland and Washington, and Penshaw (Houghton) and Washington.

There has been very little change to the Green Belt since the last boundary modifications in the 1998 UDP, other than a minor housing development within Offerton village. There has also been little further development or change to the areas beside the Green Belt.

As a whole, this section of Green Belt prevents Houghton merging with Sunderland and Washington, as well as safeguarding countryside encroachment and avoiding urban sprawl. The Green Belt also supports major green infrastructure corridors within the area that link to and support national and local wildlife sites.

## Cox Green, Offerton and Penshaw Areas Stage 1 Assessment

The following parcels have been assessed against the Green Belt purposes: CO1, CO2, CO3, CO4, CO5, CO6, CO7, CO8, CO9, CO10, CO11, CO12, CO13, CO14, CO15, CO16, CO17, CO18, CO19, CO20, CO21, CO22, CO23, CO24, CO25, CO26, CO27, CO28, CO29, CO30, CO31, CO32.

### Green Belt Purposes

1. Check the unrestricted sprawl of the built-up area of the city
2. Preventing neighbouring towns merging into one another (in this case, Sunderland, Washington and Houghton-le-Spring)
3. Assist in safeguarding the countryside from encroachment
4. Preserve the setting and special character of Springwell Village and Newbottle Village
5. Assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

Criteria	Parcels																																	
	CO1	CO2	CO3	CO4	CO5	CO6	CO7	CO8	CO9	CO10	CO11	CO12	CO13	CO14	CO15	CO16	CO17	CO18	CO19	CO20	CO21	CO22	CO23	CO24	CO25	CO26	CO27	CO28	CO29	CO30	CO31	CO32		
1	C	C	D	D	B	C	D	E	E	E	E	E	E	E	E	E	E	E	E	E	E	E	E	E	E	E	E	E	E	E	E	E	E	
2	B	B	D	D	A	B	C	D	D	D	D	D	D	D	D	B	B	D	D	D	D	D	D	D	B	D	D	D	D	D	D	B	C	B
3	C	C	E	E	A	C	E	E	E	E	E	E	E	E	E	C	E	E	E	E	E	E	E	E	D	E	E	E	E	E	E	E	E	
4	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A	A

### Conclusions of Stage 1

Criteria	Assessment
1	The Parcels adjoining Penshaw are partially contained by the built up area and there is minor potential for rounding off the existing urban area. Otherwise, development of any part of the rest of this section of the Green Belt would result in substantial protrusion into the wider Green Belt.
2	The Green Belt in this area as a whole is quite wide east-west and north-south, though the gap between Penshaw and Washington is fairly narrow. There are a few urban fringe parcels that would have a minor impact on Green Belt merging. Central parcels would split the Green Belt area and have a more significant impact.
3	The parcels adjacent to the built-up area of Penshaw constitute urban fringe. The hamlets of Offerton and Cox Green broadly support the openness of the surrounding countryside. The remaining open countryside plays an important role in supporting the openness of the wider countryside.

4	No impact to this purpose.
5	Most of the Parcels are greenfield sites within the open countryside. Parcel CO5 is a greenfield site that is part of the urban area, whereas parcels CO1, CO2, CO3 and CO6 are greenfield sites within the urban fringe and parcel CO8 is brownfield land within the open countryside.

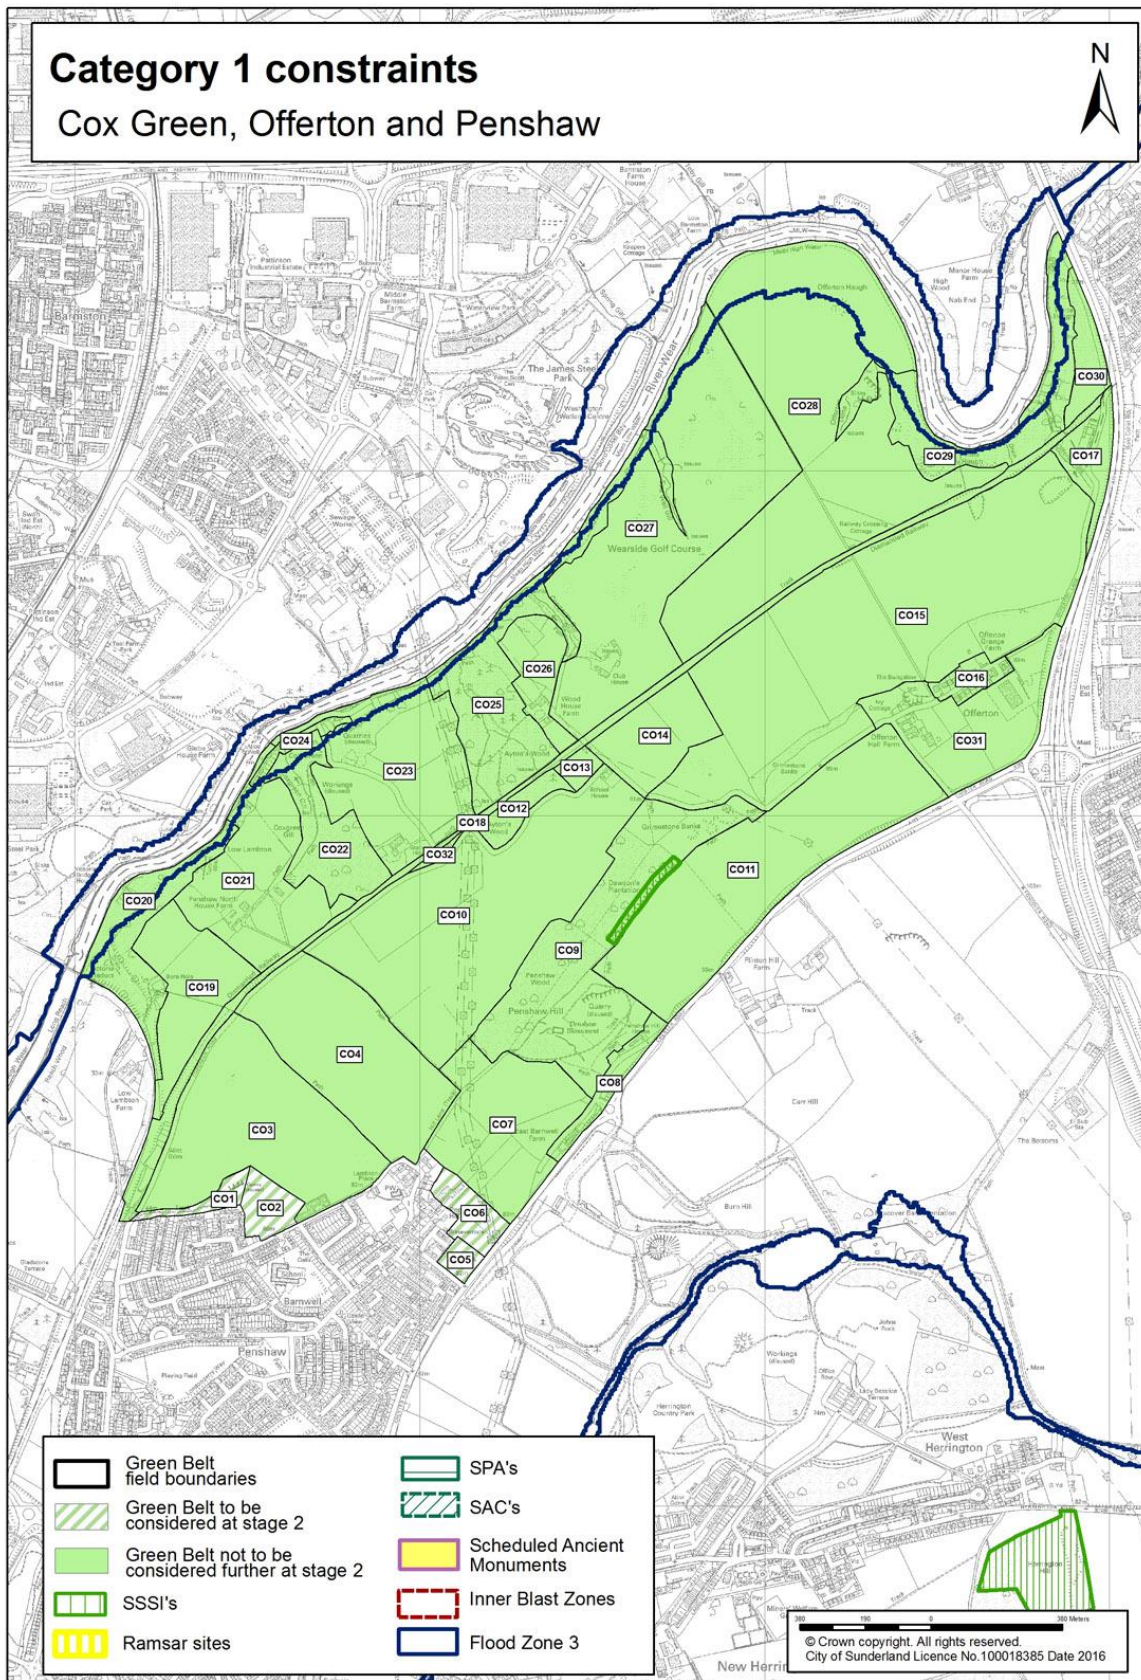

The following Parcels are considered to be fundamental to the purpose(s) of the Sunderland Green Belt and are recommended for full retention, without any further consideration required: CO3, CO4, CO7, CO8, CO9, CO10, CO11, CO12, CO13, CO14, CO15, CO16, CO17, CO18, CO19, CO20, CO21, CO22, CO23, CO24, CO25, CO26, CO27, CO28, CO29, CO30, CO31, CO32.

All of the parcels form open countryside beyond the urban fringe, contributing to the openness of the Green Belt and supporting the landscape around the River Wear and/or Penshaw Monument. This includes parcels that abut the Sunderland built-up area to the east, but in these cases they are physically separated to this area by the A19. If developed, all of the Parcels would constitute urban sprawl with little opportunity for rounding-off, and create a major incursion into the Green Belt.

The remaining Parcels will be assessed at stage 2: CO1, CO2, CO5, CO6.

## Cox Green, Offerton and Penshaw Areas Stage 2

Parcel	Stage 2 Assessment	Conclusion
CO1	No category 1 designations	Assessed at Site Selection
CO2	No category 1 designations	Assessed at Site Selection
CO5	No category 1 designations	Assessed at Site Selection
CO6	No category 1 designations	Assessed at Site Selection

## 9. New and West Herrington

This portion of the Green Belt lies between Sunderland and Houghton-le-Spring, west of the A19 and east of the A183 and incorporating Herrington Country Park. It helps to physically separate Sunderland and Houghton-le-Spring. The Green Belt helps to create a strategic Green Infrastructure corridor that links the River Wear Estuary to the north and Warden Law and South Hetton to the south.

The Green Belt continues beyond this area to the north, south and the east. The Green Belt boundary is distinct, closely following the built-up area at Penshaw, New Herrington and West Herrington, and also the A19 at Hastings Hill. Part of New Herrington (Lady Beatrice Terrace and Office Row) lies fully within the Green Belt.

The Green Belt forms a semi-rural landscape typified by farmland, but also including Herrington Country Park, which has formal features but blends well into the surrounding rolling countryside.

The Green Belt between Sunderland and Houghton varies between 2km and 3km in width, except for the narrow gap between West and Middle Herrington which is 500m wide.

The reclamation of the former Herrington Colliery site and creation of Herrington Country Park represents a major change to this section of Green Belt. It has transformed the landscape from industrial to rural/recreational. This has also had an enormous impact on the outlook of the surrounding residential areas of West Herrington, New Herrington and Penshaw. New development in these areas has, however, been limited- residential development at Chislehurst Road, near Herrington Burn, being the exception.

As a whole, this section of Green Belt prevents Houghton merging with Sunderland as well as safeguarding countryside encroachment and avoiding urban sprawl. The Green Belt also supports major green infrastructure corridors within the area that link to and support national and local wildlife sites.

## New and West Herrington Stage 1 Assessment

The following parcels have been assessed against the Green Belt purposes: HE1, HE2, HE3, HE4, HE5, HE6, HE7, HE8, HE9, HE10, HE11, HE12, HE13, HE14.

### Green Belt Purposes

1. Check the unrestricted sprawl of the built-up area of the city
2. Preventing neighbouring towns merging into one another (in this case, Sunderland and Houghton-le-Spring)
3. Assist in safeguarding the countryside from encroachment
4. Preserve the setting and special character of Springwell Village and Newbottle Village
5. Assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

Criteria	Parcels													
	HE1	HE2	HE3	HE4	HE5	HE6	HE7	HE8	HE9	HE10	HE11	HE12	HE13	HE14
1	B	C	E	D	E	E	E	C	C	E	E	E	E	E
2	B	C	E	C	D	A	E	C	B	D	D	D	D	B
3	C	C	E	C	E	A	E	D	D	E	E	E	E	E
4	A	A	A	A	A	A	A	A	A	A	A	A	A	A
5	C	C	D	C	D	A	C	C	C	D	D	D	D	D

### Conclusions of Stage 1

Criteria	Assessment
1	With the exception of a few small areas that are partially contained by the adjoining built-up area, for the most part the impact of development would result in substantial protrusion into the wider Green Belt.
2	This section of the Green Belt is important in preventing the merging of the Houghton area with Sunderland. For the most part the Green Belt is wide- some urban fringe parcels would have only limited impact, whilst central areas would have far more of an impact. The Green Belt is much narrower at West Herrington, and any development at Parcel HE3 would have a fundamental impact.
3	Parcels HE1, HE2 and HE4 are very small areas that comprise urban fringe, on the edge of West Herrington. The remainder is part of the wider open countryside. Any further development encroachment within HE6 would be within the confines of the settlement boundary.
4	No impact to this purpose.
5	The land comprises greenfield sites in open countryside or urban fringe. Parcel HE6 is a developed area.

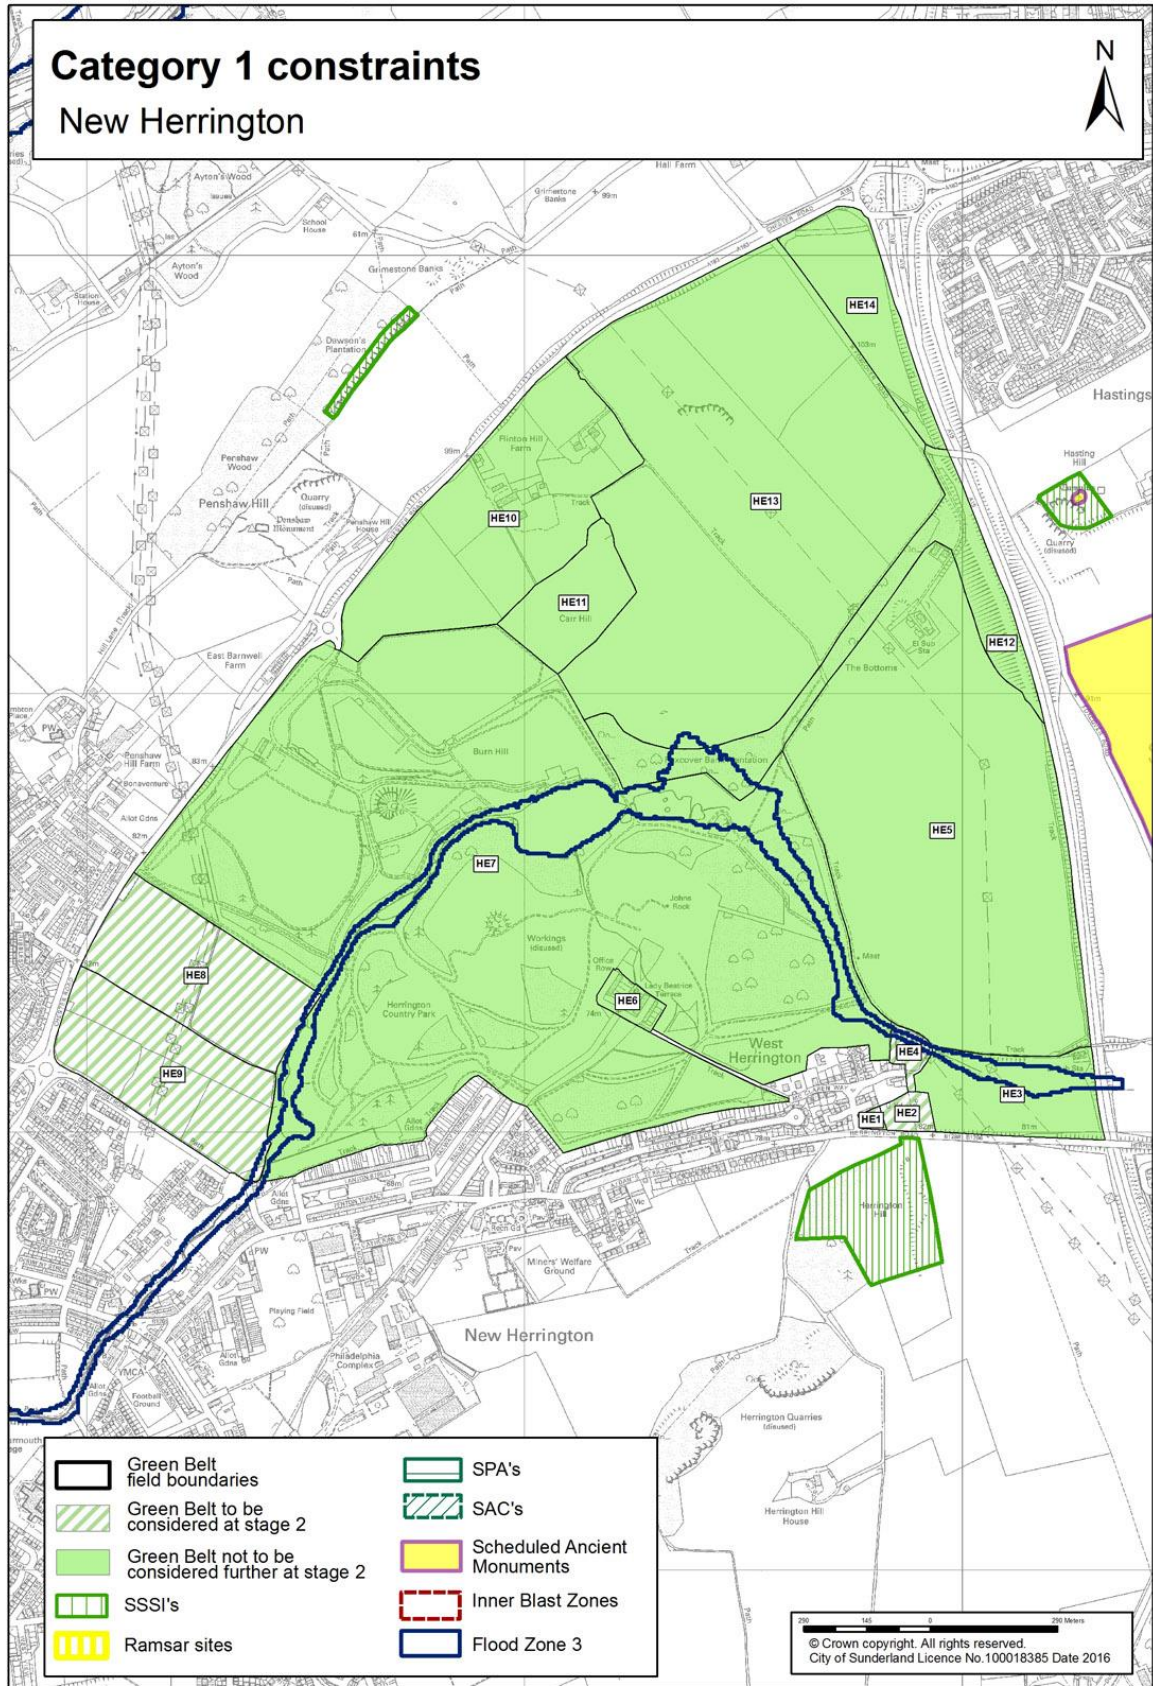

The following Parcels are considered to be fundamental to the purpose(s) of the Sunderland Green Belt and are recommended for full retention, without any further consideration required: HE3, HE5, HE6, HE7, HE10, HE11, HE12, HE13, HE14.

All of the parcels form open countryside beyond the urban fringe, contributing to the openness of the Green Belt and supporting the Magnesian Limestone landscape. This includes Parcel HE7 (Herrington Country Park) which has elements of urban fringe, but has been designed to blend into the wider countryside landscape. These parcels, if developed, would constitute urban sprawl with little opportunity for rounding-off, and create a major incursion into the Green Belt. Parcels HE3 and HE7 greatly compromise the Green Belt gap between Sunderland and Houghton-le-Spring.

The remaining Parcels are: HE1, HE2, HE4, HE8 and HE9.

## New and West Herrington Stage 2

Parcel	Stage 2 Assessment	Conclusion
HE1	No category 1 designations	Assessed at Site Selection
HE2	No category 1 designations	Assessed at Site Selection
HE4	Part of parcel is subject to Flood Zone 3 (Herrington Burn)	Assessed at Site Selection
HE8	Partly affected. Parcel forms a boundary to the Herrington Burn, and is therefore subject to Flood Zone 3.	Assessed at Site Selection
HE9	Partly affected. Parcel forms a boundary to the Herrington Burn, and is therefore subject to Flood Zone 3.	Assessed at Site Selection

## 10. Middle Herrington

This portion of the Green Belt lies to the east of the A19, along the western edge of Sunderland. It helps to physically separate Sunderland and Houghton-le-Spring. The Green Belt forms part of a Green Infrastructure corridor that extends into the heart of the main built-up area, enabling Barnes Park (and its Extensions) to join to the wider Green Belt at Herrington.

In some respects, the A19 creates a physical barrier and division to this area from the wider Green Belt at Herrington, though in landscape terms this is often not visible, giving the appearance of a seamless rolling landscape up to the edge of the Sunderland built-up area.

The Green Belt boundary with Sunderland is distinct, following the urban area and clear field boundaries for the majority of the area.

Though much of the area is agricultural farmland, the proximity of the urban area ensures that this portion of Green Belt is urban fringe, which is further felt to the south where the Green Belt includes formal parkland and amenity greenspace. The Green Belt between Sunderland and Houghton extends to over 3km in width, but narrows to just 500m between West and Middle Herrington.

There has been virtually no change to the Green Belt since the last boundary modifications in the 1998 UDP. There has also been little further development or change to the areas beside the Green Belt.

As a whole, this section helps to prevent the merging of Sunderland and Houghton, which is especially relevant where the gap to West Herrington is already narrow and the Green Belt acts to prevent urban sprawl and further corridor narrowing. The Green Belt also supports

major green infrastructure corridors within the area that link to and support nationally protected wildlife sites and scheduled ancient monuments.

### Middle Herrington Stage 1 Assessment

The following parcels have been assessed against the Green Belt purposes: MD1, MD2, MD3, MD4, MD5, MD6, MD7, MD8, MD9.

#### Green Belt Purposes

1. Check the unrestricted sprawl of the built-up area of the city
2. Preventing neighbouring towns merging into one another (in this case, Sunderland and Houghton-le-Spring)
3. Assist in safeguarding the countryside from encroachment
4. Preserve the setting and special character of Springwell Village and Newbottle Village
5. Assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

Criteria	Parcels								
	MD1	MD2	MD3	MD4	MD5	MD6	MD7	MD8	MD9
1	C	C	E	C	C	C	A	A	B
2	A	B	B	D	D	D	B	A	B
3	B	D	D	D	D	C	B	B	B
4	A	A	A	A	A	A	A	A	A
5	C	C	D	C	C	C	B	B	A

#### Conclusions of Stage 1

Criteria	Assessment
1	The parcels towards the south have more than one boundary with the built-up area with the potential for some rounding off, particularly in the case of Parcels MD7 and MD8. The Parcels to the north are partially contained by the built up area whereas Parcel MD3 has no boundary with the built up area.
2	The Green Belt narrows quite significantly between West Herrington and Middle Herrington- consequently, development of Parcels MD5 and MD6 would cause a significant impact. Elsewhere, development of a single Parcel would not narrow the Green Belt very significantly.
3	Parcels MD1, MD7 and MD8, and to a lesser degree Parcel MD6 are considered to comprise urban fringe. The remaining Parcels feel more separate from the urban area and have a greater role in supporting the openness of the wider countryside beyond the A19.
4	No impact to this purpose.

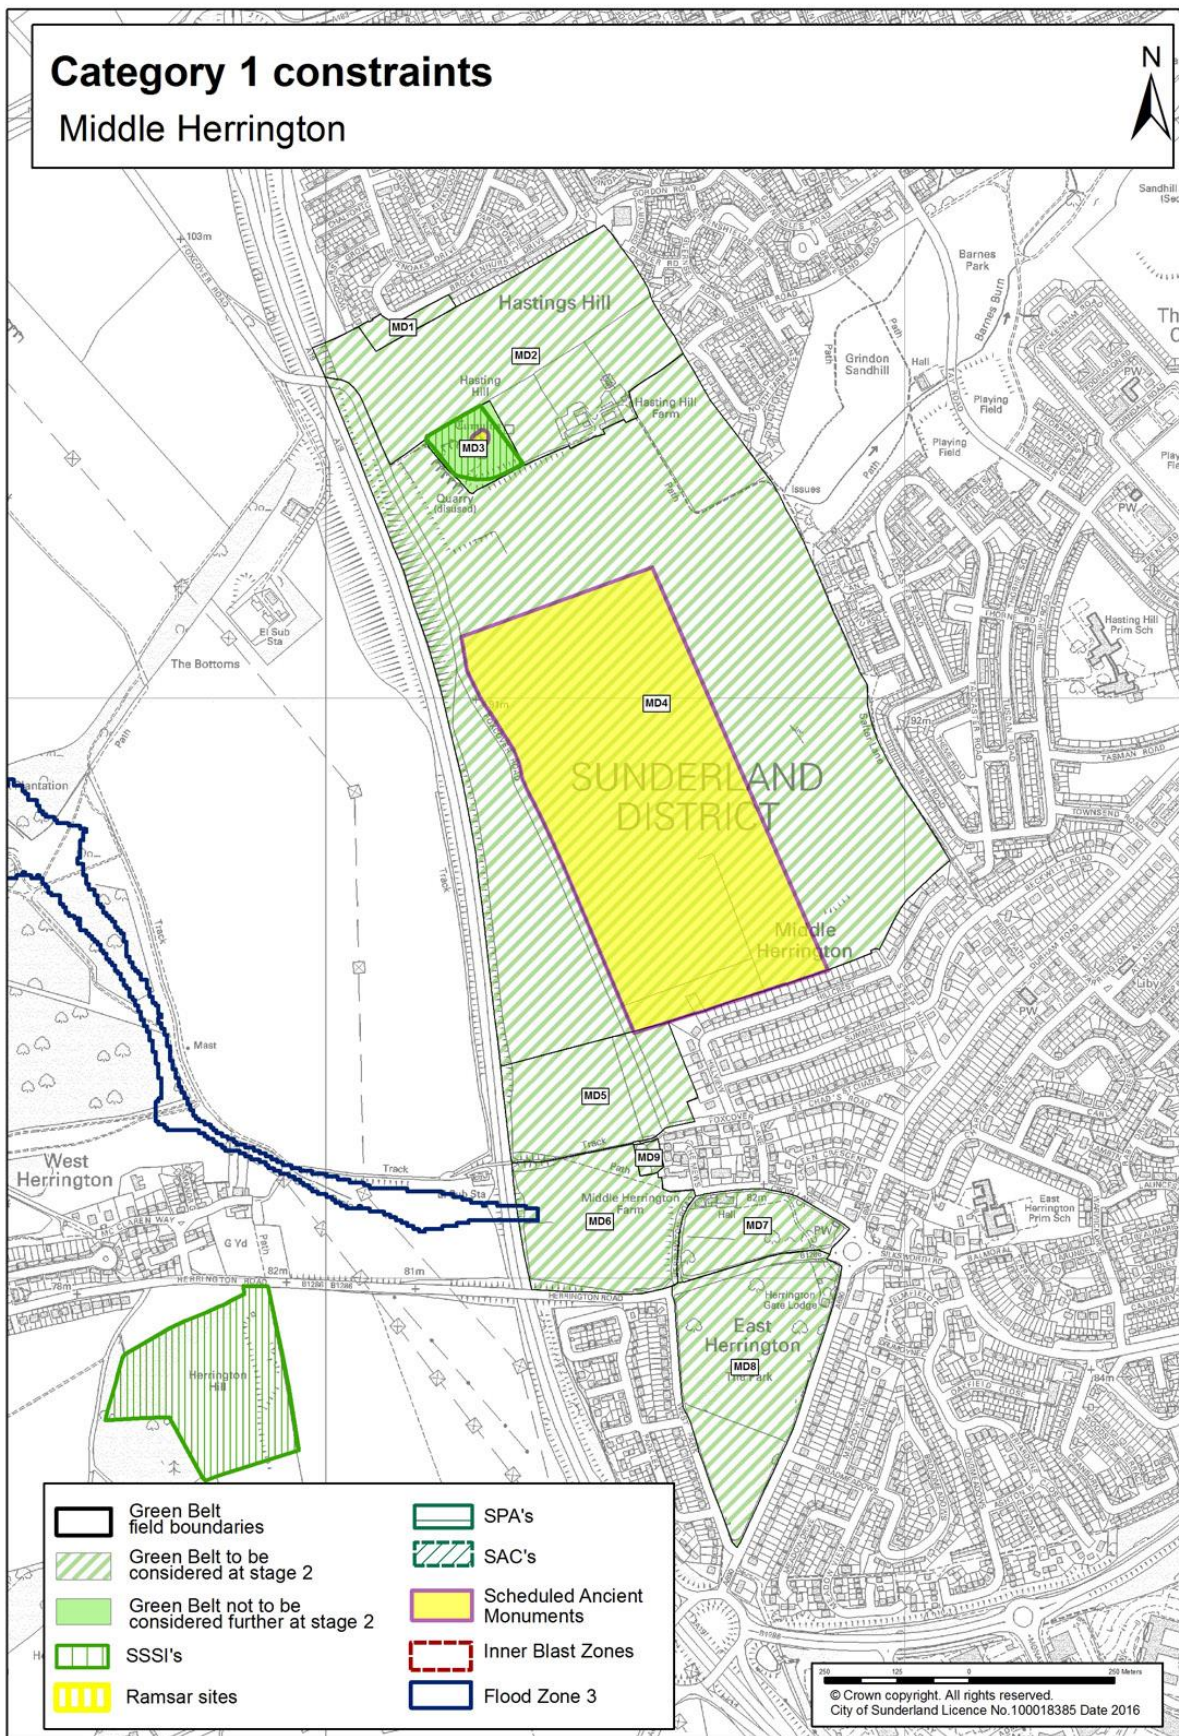

5	Most of the Parcels constitute greenfield land on the urban fringe, with Parcels MD7 and MD8 comprising greenfield sites considered to be part of the urban area.
---	---

Parcel MD3 is considered to be fundamental to the purpose(s) of the Sunderland Green Belt and is recommended for full retention, without any further consideration required:

Parcel MD3 forms open countryside beyond the urban fringe, contributing to the openness of the Green Belt and supporting the Magnesian Limestone landscape. If developed, it would constitute urban sprawl with no opportunity for rounding-off.

The remaining Parcels are: MD1, MD2, MD4, MD5, MD6, MD7, MD8, MD9.

## Middle Herrington Stage 2

Parcel	Stage 2 Assessment	Conclusion
<b>MD1</b>	No category 1 designations	Assessed at Site Selection
<b>MD2</b>	No category 1 designations	Assessed at Site Selection
<b>MD4</b>	Partly affected. The central part of this parcel is protected as a Scheduled Ancient Monument.	Assessed at Site Selection
<b>MD5</b>	No category 1 designations	Assessed at Site Selection
<b>MD6</b>	Partly affected. A small part of this parcel is affected by Flood Zone 3 (Herrington Burn)	Assessed at Site Selection
<b>MD7</b>	No category 1 designations	Assessed at Site Selection
<b>MD8</b>	No category 1 designations	Assessed at Site Selection
<b>MD9</b>	No category 1 designations	Assessed at Site Selection

## 11. Houghton

This portion of the Green Belt lies between Sunderland and Houghton-le-Spring, west of the A19 and A690 and south of New Herrington. It helps to physically separate Sunderland and Houghton-le-Spring, and forms a strategic Green Infrastructure corridor that links the River Wear Estuary to the north and Warden Law and South Hetton to the south. It also helps to form the setting to the Newbottle Conservation Area.

The Green Belt continues beyond this area to the north and south. The Green Belt boundary with Sunderland is distinct, following the A19. To the west, however, the boundary is less clear. On the one hand, the Green Belt incorporates a small part of industrial land at Philadelphia as well as the private grounds of New Herrington Workmens Club. On the other hand, the churchyard and paddocks to the east of Newbottle and greenspace to the north of Houghton town centre are omitted. The remainder of this boundary hugs the built-up area.

The Green Belt forms a rural landscape typified by farmland and the Magnesian Limestone Escarpment, although the landfill site at Houghton provides a stark contrast. There are also activities related to the urban fringe including allotments, formal parkland and horse paddocks. The Green Belt between Sunderland and Houghton varies between 1.5km and 2.5km in width, except for the narrow gap between West and Middle Herrington which is 500m wide.

There has been very little change to the Green Belt since the last boundary modifications in the 1998 UDP, other than landfilling at the Houghton Quarry site. There has also been little further development or change to the areas beside the Green Belt.

As a whole, this section of Green Belt prevents Houghton merging with Sunderland as well as safeguarding countryside encroachment and avoiding urban sprawl. It also forms the backdrop and setting to Newbottle historic settlement. The Green Belt also supports major green infrastructure corridors within the area that link to and support national and local wildlife sites.

### **Houghton Stage 1 Assessment**

The following parcels have been assessed against the Green Belt purposes: HO1, HO2, HO3, HO4, HO5, HO6, HO7, HO8, HO9, HO10, HO11, HO12, HO13, HO14, HO15, HO16, HO17, HO18, HO19, HO20, HO21, HO22, HO23, HO24, HO25, HO26, HO27, HO28, HO29, HO30.

#### **Green Belt Purposes**

1. Check the unrestricted sprawl of the built-up area of the city
2. Preventing neighbouring towns merging into one another (in this case, Sunderland and Houghton-le-Spring)
3. Assist in safeguarding the countryside from encroachment
4. Preserve the setting and special character of Springwell Village and Newbottle Village
5. Assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

5	B	C	C	C	D	D	D	D	D	D	C	D	A	D	D	D	D	C	C	D	D	C	D	D	C	C	C	C	C	C	

### Conclusions of Stage 1

Criteria	Assessment
1	Most of the parcels along the western and northern edge have at least one boundary with the urban area, with one or two parcels with potential for rounding off. Towards the east, the impact of development would result in a substantial protrusion into the wider Green Belt.
2	The Green Belt is fairly wide, though narrows at the north beside West Herrington. In most cases, development of a single parcel would not narrow the Green Belt very significantly, though any development within central parcels would cause a clear split in the Green Belt width.
3	Westernmost parcels constitute urban fringe whilst the eastern parcels are part of the wider open countryside, including those flanking the A19. Parcels HO1 and HO13 make no contribution to safeguarding the countryside from further encroachment.
4	The parcels within proximity to Newbottle have been instrumental to the development of the settlement and contribute to its character and setting.
5	Most of the Parcels are greenfield sites within the open countryside or on the urban fringe. Houghton quarry landfill site is a brownfield site as are Parcels HO1 and HO13.

The following Parcels are considered to be fundamental to the purpose(s) of the Sunderland Green Belt and are recommended for full retention, without any further consideration required: HO5, HO6, HO7, HO8, HO9, HO10, HO14, HO15, HO16, HO17, HO18, HO19, HO20, HO21, HO23, HO24, HO25, HO30.

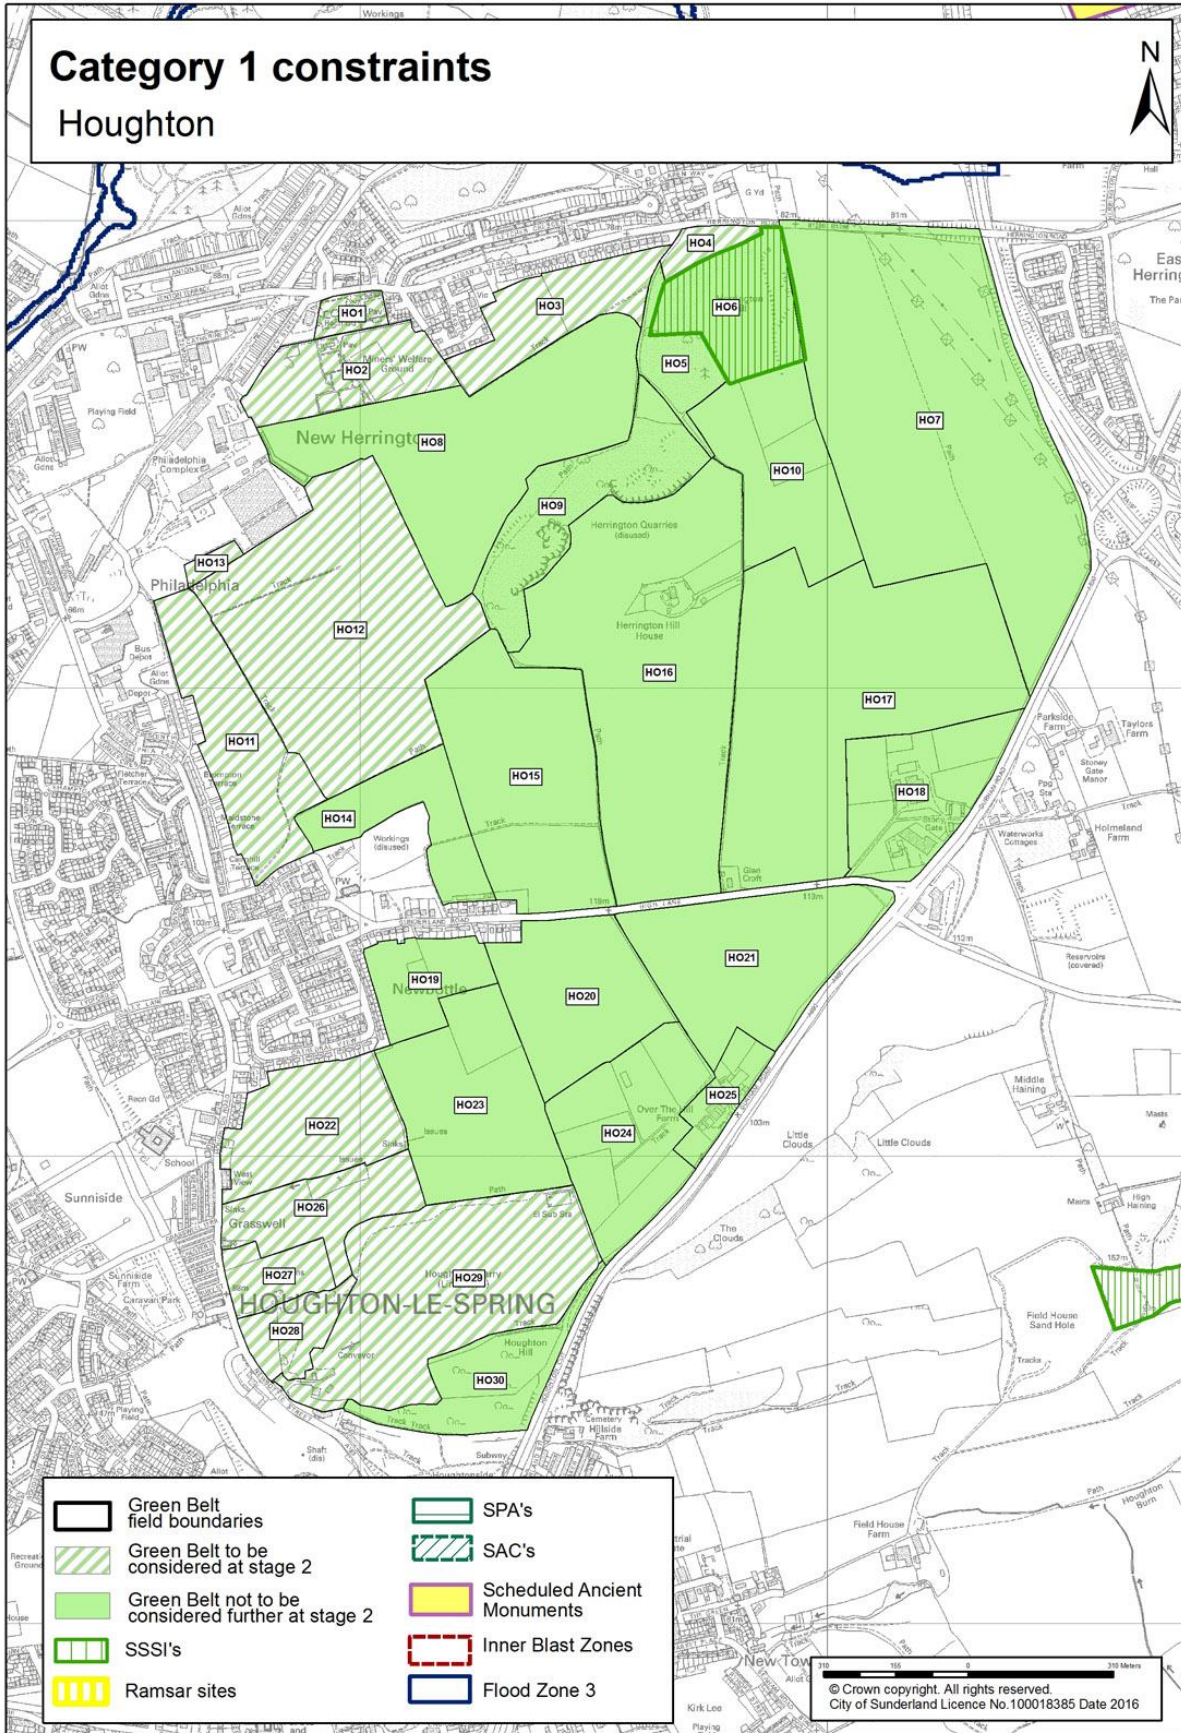

Parcels HO5, HO6, HO7, HO8, HO9, HO10, HO15, HO16, HO17, HO18, HO21 and HO23, HO24, HO25 form open countryside beyond the urban fringe, contributing to the openness of the Green Belt and Magnesian Limestone landscape. This includes Parcel HO7 that abuts the Sunderland built-up area to the east, but in this case it is physically separated to this area by the A19. All of the Parcels (except for HO19), if developed, would constitute urban sprawl with little opportunity for rounding-off, and would create a major incursion into the Green Belt. Parcels HO14 and HO19 form the backdrop to Newbottle Conservation

Area, and development here would have a major adverse impact to the setting of this historic village.

The remaining Parcels are: HO1, HO2, HO3, HO4, HO11, HO12, HO13, HO22, HO26, HO27, HO28, HO29.

# Houghton Stage 2

## 12. Warden Law

This portion of the Green Belt lies between Sunderland and Houghton-le-Spring, south of the A19, east of the A690 and north of the B1404. It helps to physically separate Sunderland and Houghton-le-Spring. The Green Belt helps to create two strategic Green Infrastructure corridors that link the River Wear Estuary north-south to County Durham, and also eastwards to the North Sea, between Ryhope and Seaham.

The Green Belt continues beyond this area to the northwest and east. The Green Belt boundary with Sunderland is distinct, following the A19, and the B1404 also forms a clear boundary to the south. The boundary at Houghton is relatively clear, following the urban area for the most part, although there remains greenfield land at Market

Place that is allocated for employment use.

Overall, the Green Belt forms a rural landscape typified by farmland and the Magnesian Limestone landscape. However, beside Houghton there are also activities related to the urban fringe including allotments, a cemetery, public house and horse paddocks, and further east at Warden Law there is also a go-kart track, further horse paddocks and a golf course.

The Green Belt between Sunderland and Houghton varies between 2km and 2.5km in width.

There has been very little change to the Green Belt since the last boundary modifications in the 1998 UDP, other than at Old Burdon Farm, where fishing lakes and a Golf Course have

been constructed on agricultural land, altering the landscape character. There has also been little further development or change to the areas beside the Green Belt.

As a whole, this section of Green Belt prevents Houghton merging with Sunderland as well as safeguarding countryside encroachment and avoiding urban sprawl. The Green Belt also supports major green infrastructure corridors within the area that link to and support national and local wildlife sites.

### Warden Law Stage 1 Assessment

The following parcels have been assessed against the Green Belt purposes: WA1, WA2, WA3, WA4, WA5, WA6, WA7, WA8, WA9, WA10, WA11, WA12, WA13, WA14, WA15, WA16, WA17, WA18, WA19, WA20, WA21, WA22, WA23, WA24, WA25, WA26, WA27, WA28, WA29, WA30, WA31, WA32, WA33, WA34, WA35, WA36, WA37, WA38, WA39, WA40, WA41, WA42.

#### Green Belt Purposes

1. Check the unrestricted sprawl of the built-up area of the city
2. Preventing neighbouring towns merging into one another (in this case, Sunderland, Houghton-le-Spring and Seaham)
3. Assist in safeguarding the countryside from encroachment
4. Preserve the setting and special character of Springwell Village and Newbottle Village
5. Assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

### Conclusions of Stage 1

Criteria	Assessment
1	Most of the area has no boundary with the urban area and consists of greenfield land in open countryside. As such, any development would result in a substantial protrusion into the wider Green Belt. The parcels to the western

	edge bound the urban area of Houghton.
2	This area forms a wide Green Belt corridor between Sunderland, Seaham and Houghton. Any development within central parcels would cause a clear split in the Green Belt width, whilst parcels on the edge would have less of an impact on the gap. Easternmost parcels form a narrower Green Belt area, though it should be noted that further adjacent Green Belt land exists in County Durham.
3	Almost all of the area is physically separate from the urban area (with the exception of Parcels WA21, WA23, WA27, WA32, WA33 and WA42), and supports the openness of the wider countryside.
4	No impact to this purpose.
5	Most of the area consists of greenfield land in open countryside. Westernmost Parcels constitute greenfield land on the urban fringe. Parcels WA1 and WA3 are partly developed and Parcels WA18 and WA31 are brownfield sites within the open countryside.

The following Parcels are considered to be fundamental to the purpose(s) of the Sunderland Green Belt and are recommended for full retention, without any further consideration required:

WA1, WA2, WA3, WA4, WA5, WA6, WA7, WA8, WA9, WA10, WA11, WA12, WA13, WA14, WA15, WA16, WA17, WA18, WA19, WA20, WA22, WA24, WA25, WA26, WA28, WA29, WA30, WA31, WA34, WA35, WA36, WA37, WA38, WA39, WA40, WA41.

All of the parcels form open countryside beyond the urban fringe, contributing to the openness of the Green Belt and supporting the Magnesian Limestone landscape. This includes parcels that abut the Sunderland built-up area to the north, but in these cases they are physically separated to this area by the A19. If developed, it would constitute urban sprawl with little opportunity for rounding-off, and create a major incursion into the Green Belt.

The remaining Parcels are: WA21, WA23, WA27, WA32, WA33, WA42.

Parcel	Stage 2 Assessment	Conclusion

WA23	No category 1 designations	Assessed at Site Selection
WA27	No category 1 designations	Assessed at Site Selection
WA32	No category 1 designations	Assessed at Site Selection
WA33	No category 1 designations	Assessed at Site Selection
WA42	No category 1 designations	Assessed at Site Selection

### 13. Burdon and South Ryhope

This portion of the Green Belt lies on the south side of Sunderland, and forms part of a wider swathe of Green Belt that extends southwards into County Durham. It helps to physically separate the villages of Ryhope, Silksworth and Doxford Park (south Sunderland) from Seaham. The hamlets of Burdon and Old Burdon lie fully within the Green Belt. The

Green Belt helps to create a strategic Green Infrastructure corridor from the North Sea inland to the Magnesian Limestone Escarpment between Sunderland and Houghton-le-Spring.

For the most part, the Green Belt is physically separated from the Sunderland built-up area by greenfield land. To the west is greenfield land at Chapelgarth (Doxford Park) that is allocated for housing in the UDP. To the south and east of Hall Farm and Tunstall Lodge there is a narrow strip of settlement break (agricultural land) that widens out considerably as it extends towards Tunstall Bank. At Cherry Knowle, the Green Belt forms a boundary with the hospital grounds, and at South Ryhope, greenfield land has been earmarked for development. The coastal strip to the east of the Durham Coast Railway has not been identified as Green Belt, unlike the coastal land immediately to the south of Ryhope Dene in County Durham.

The northern Green Belt boundary is quite distinct, following Burdon Lane as far as the edge of Cherry Knowle hospital grounds. To the east of the A1018, however, the Green Belt boundary does not follow a specific geographical boundary eastwards until it reaches the Durham Coast Railway. East of the railway, the boundary follows Ryhope Dene to the coast.

The Green Belt forms a rural landscape typified by coastal Magnesian Limestone farmland which flanks the west-east incised Burdon/Cherry Knowle/Ryhope Dene. For the most part, the Green Belt between Sunderland and Seaham is over 1km wide, except between Cherry Knowle and Seaham Grange Industrial Estate where the gap is reduced to approximately 600m.

There has been very little change to the Green Belt since the last boundary modifications in the 1998 UDP, other than minor residential infilling at Burdon village, and the erection of a special educational needs bungalow at Ryhope Dene House. There has been development beside the Green Belt at Ryhope with the construction of the Southern Radial Route, together with new housing beside Stockton Road and at Highclere Drive. Further development has also taken place at Cherry Knowle, with the creation of a new hospice and road.

As a whole, this section helps to prevent the merging of Sunderland with Seaham, as well as safeguarding countryside encroachment and avoiding urban sprawl. The Green Belt also supports a major east-west green infrastructure corridor that links to and supports international, national and local wildlife sites.

### **Burdon and South Ryhope Stage 1 Assessment**

The following parcels have been assessed against the Green Belt purposes: BU1, BU2, BU3, BU4, BU5, BU6, BU7, BU8, BU9, BU10, BU11, BU12, BU13, BU14.

## Green Belt Purposes

1. Check the unrestricted sprawl of the built-up area of the city
2. Preventing neighbouring towns merging into one another (in this case, Sunderland, Houghton-le-Spring and Seaham)
3. Assist in safeguarding the countryside from encroachment
4. Preserve the setting and special character of Springwell Village and Newbottle Village
5. Assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

## Conclusions of Stage 1

Criteria	Assessment
1	Most of the area has no boundary with the urban area and consists of greenfield land in open countryside. As such, any development would result in a substantial protrusion into the wider Green Belt. Some eastern parcels have a boundary with Ryhope (urban fringe).
2	This area forms a wide Green Belt area between Sunderland, Seaham and Houghton. Any development within central parcels would cause a clear split in the Green Belt width, whilst parcels on the edge would have less of an impact on the gap. Easternmost Parcels form a narrower Green Belt area, though it should be noted that further adjacent Green Belt land exists in County Durham. Parcel BU14 is already largely developed and is considered to have limited impact on the area's Green Belt width.
3	Most of the area is physically separate from the urban area, and supports the openness of the wider countryside. Parcel BU4 constitutes urban fringe, and development is taking place alongside more than one of its boundaries. Parcel BU5 forms Burdon Village, which broadly supports the openness of the countryside- any further encroachment here would be within the confines of the settlement boundary. Parcel BU11 is also urban fringe, and form a SUDS area. Parcel BU14 is mostly built-up and would also constitute urban fringe.
4	No impact to this purpose.

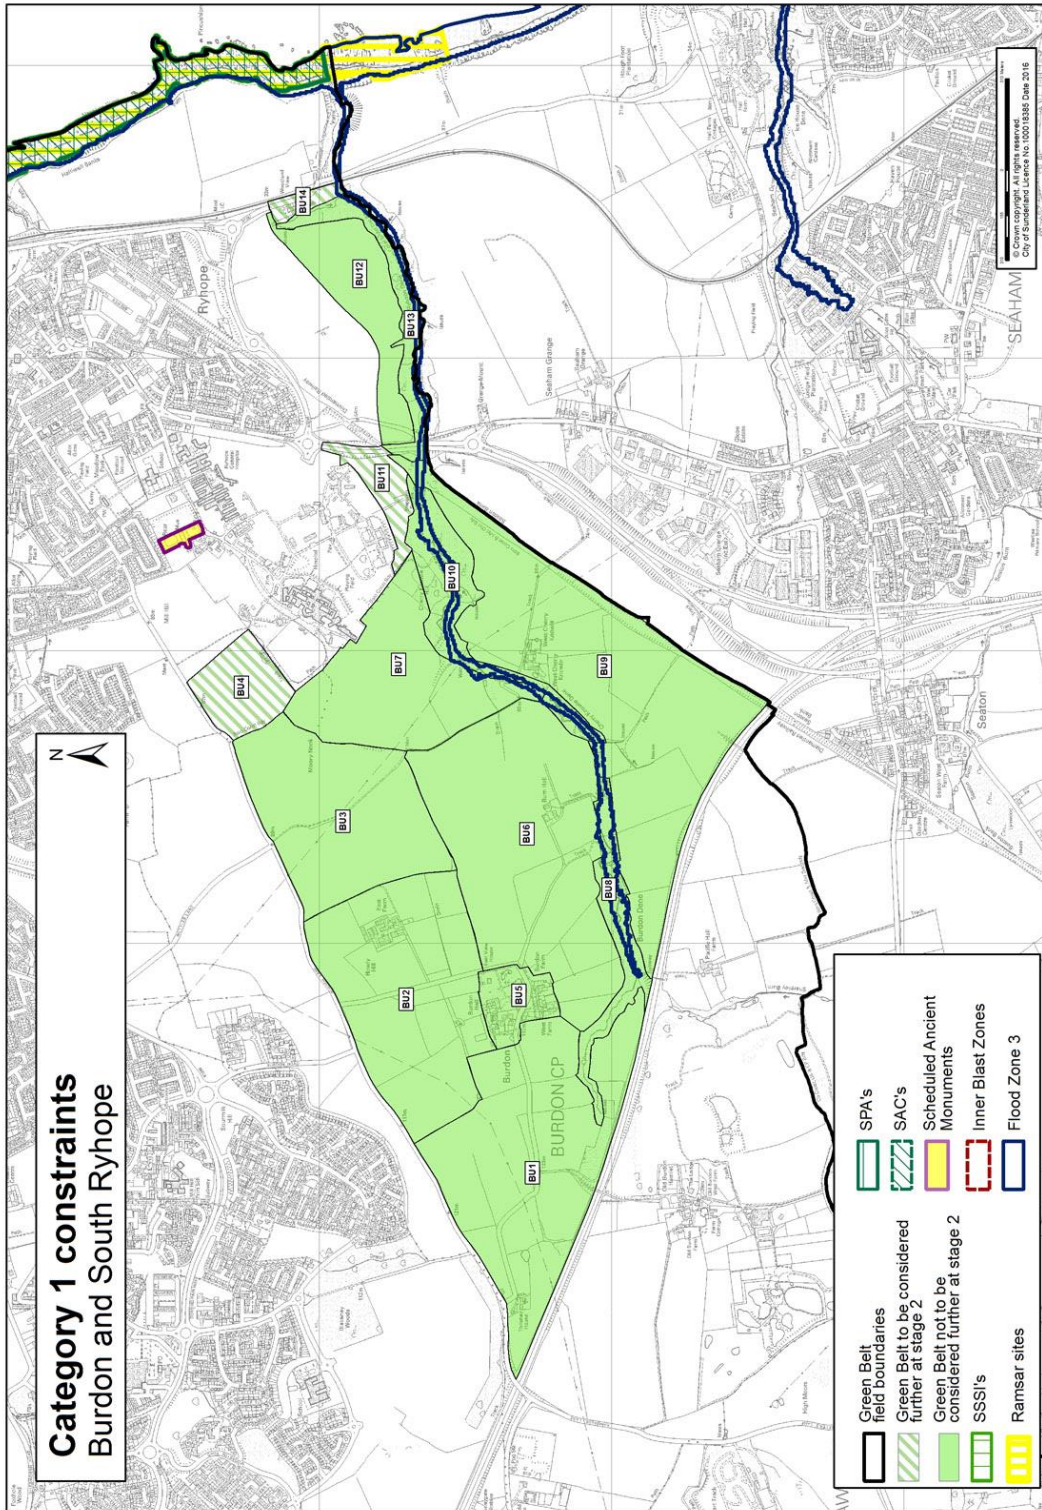

5	Most of the area consists of greenfield land in open countryside. Parcels BU4 and BU11 beside Ryhope constitute greenfield land in the urban fringe, whilst Parcel BU14 is developed (effectively brownfield) land in the urban fringe. Parcel BU5 is Burdon Village and therefore brownfield land forming part of a built up area.
---	---

The following Parcels are considered to be fundamental to the purpose(s) of the Sunderland Green Belt and are recommended for full retention, without any further consideration required: BU1, BU2, BU3, BU5, BU6, BU7, BU8, BU9, BU10, BU12, BU13.

All of the Parcels form open countryside beyond the urban fringe, contributing to the openness of the Green Belt and supporting the Burdon and coastal dene landscape. If developed, it would constitute urban sprawl with little opportunity for rounding-off, and create a major incursion into the Green Belt.

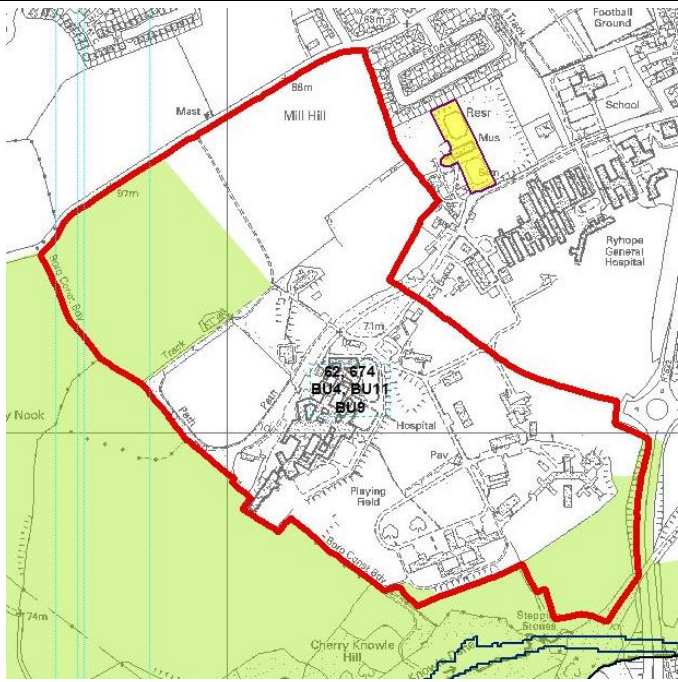

The remaining Parcels are: BU4, BU11, BU14.

## Burdon and South Ryhope Stage 2

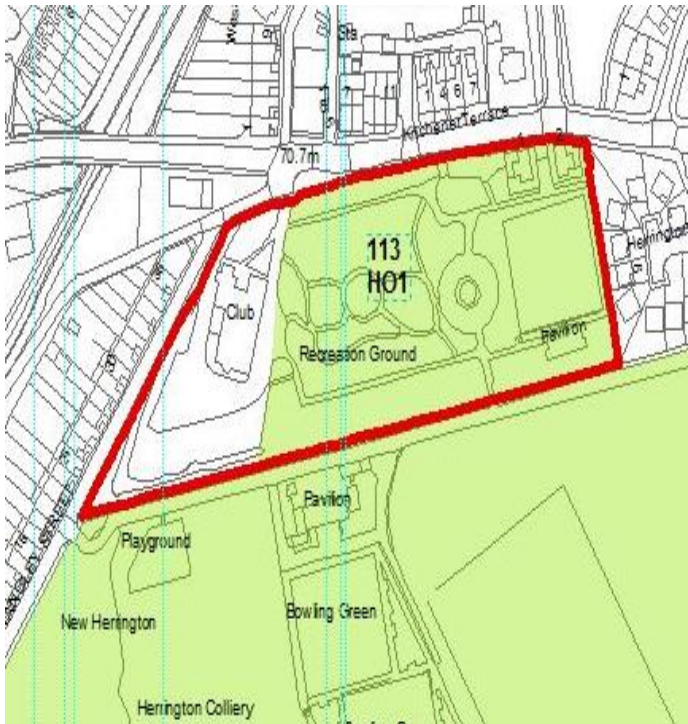

Parcel	Stage 2 Assessment	Conclusion
BU4	No category 1 designations	Assessed at Site Selection
BU11	No category 1 designations	Assessed at Site Selection
BU14	Partly affected. The southernmost part of the parcel is affected by Flood Zone 3 (Ryhope Dene).	Assessed at Site Selection

## Appendix 2 - Call Out for Sites

SHLAA Site Reference: 62/674	Boundary of Land Parcel
<b>Green Belt Parcel Reference:</b> BU4/BU9/BU11	
<b>Land Parcel Size:</b> 47.39ha	
<b>Location of Land Parcel:</b> Ryhope and Cherry Knowle Hospital

<b>Purpose 3:</b> <u>Level of Contribution: B</u>	
<b>Purpose 4:</b> <u>Level of Contribution: A</u>	
<b>Purpose 5:</b> <u>Level of Contribution: B</u>	
<b>Summary:</b> The site has no Category 1 Designations and overall performs poorly against the five Green Belt purposes. Consider as part of site selection process.	

<b>SHLAA Site Reference:</b> 697	<b>Boundary of Land Parcel with Designations Mapped</b>
<b>Green Belt Parcel Reference: Phase 1</b> NI1/NI2/NI5/NI6/NI7/NI8/NI10/NI11/NI12/NI13/NI14	
<b>Land Parcel Size:</b> 218ha	
<b>Location of Land Parcel:</b> Land North of Washington Road	
<b>General Sub Area Containing Parcel (from Stage 1 Assessment):</b> Nissan	
<b>Summary of General Area Assessment:</b> Major Contribution	
<b>Source of Land Parcel:</b> Clive Milner, Barratt Homes and Spawforths	
<b>Category 1 Designations:</b> Flood Zone 3	
<b>Does the Resultant Boundary Represent a Strongly Defined, Durable Green Belt Boundary?</b> The site has durable road boundaries to the west and south but no durable boundaries to the north and east. In some places there is no physical boundary.	
<b>Appraisal of Land Parcel Against the 5 NPPF Green Belt Purposes</b>	
<b>Purpose 1:</b> <u>Level of Contribution: E</u>	
<b>Purpose 2:</b> <u>Level of Contribution: D</u>	
<b>Purpose 3:</b> <u>Level of Contribution: E</u>	
<b>Purpose 4:</b> <u>Level of Contribution: A</u>	
<b>Purpose 5:</b> <u>Level of Contribution: D</u>	
<b>Summary:</b> Discounted. The site has Flood Zone 3 areas and overall performs strongly against the five Green Belt purposes.
